LONGITUDES DE TUBERÍA MONTADA

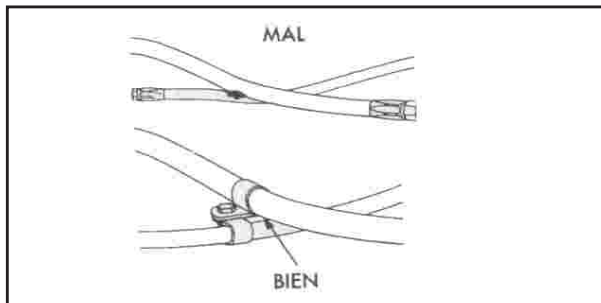

ANGULACIÓN RELATIVA DE DOS RACORES DE UN TUBO MONTADO

(En las figuras, se mantiene el racor trasero en la posición de las 12 horas y en el racor delantero marca la angulación relativa, siguiendo el sentido de las agujas del reloj).

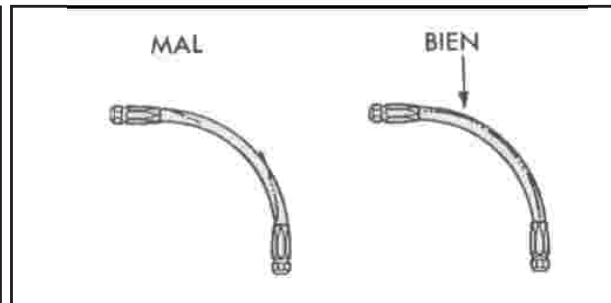

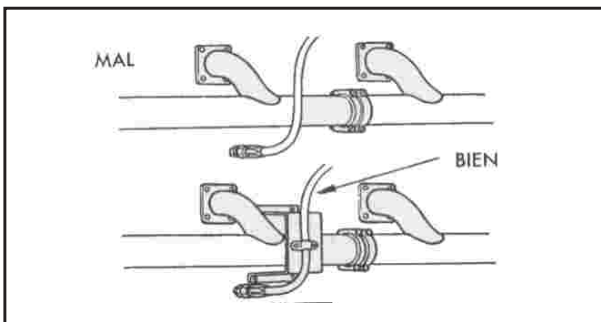

El tubo bajo presión cambia de longitud entre +2% y -4%. Instale los tubos con holgura.

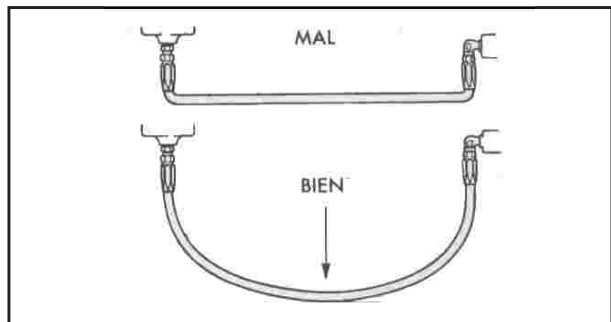

EVITE el roce de los flexibles entre sí sujetándolos con abrazaderas

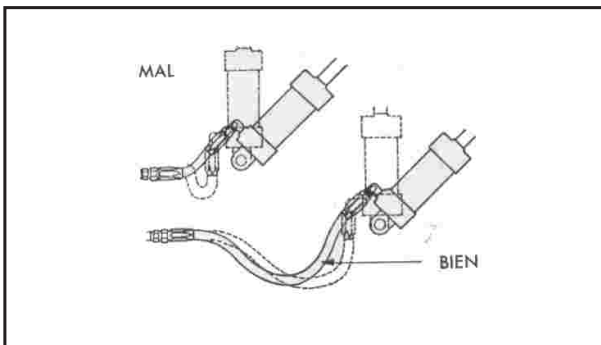

La torsión disminuye la resistencia del flexible a la presión. Existe además el peligro de que se aflojen las conexiones.

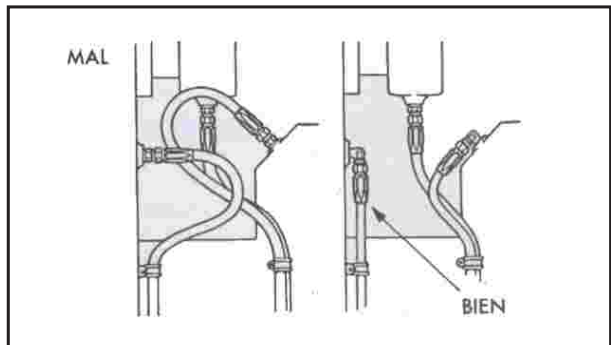

Proteja el flexible contra temperaturas elevadas.

Evite la torsión por efecto del movimiento del flexible.

Respete los radios mínimos de curvatura del flexible teniendo en cuenta todas sus posiciones.

Use codos y adaptadores para conseguir montajes más limpios y correctos.

NOTA: Para la conducción de fluidos gaseosos a alta presión, la cubierta deberá estar microperforada para permitir la efusión del gas a través de la estructura del tubo.
