PISTON SEALS

Your Partner for Sealing Technology

**Busak+Shamban**

## Your Partner for Sealing Technology

Busak+Shamban is a major international sealing force, uniquely placed to offer dedicated design and development from our market leading product and material portfolio; a one-stop shop providing the best in elastomer, thermoplastic, PTFE and composite technologies for applications in aerospace, industrial, and automotive industries.

With 50-years experience, Busak+Shamban engineers support customers with design, prototyping, production, test and installation using state-of-the-art design tools. An international network of over 60 facilities worldwide includes 32 manufacturing sites, strategically positioned research and development centres, including materials and development laboratories and locations specialising in design and applications.

Developing and formulating materials in-house, we utilise the resource of our material database, including over 2,000 proprietary compounds and a range of unique products.

Busak+Shamban fulfil challenging service requirements, supplying standard parts in volume or a single custom-manufactured component, through our integrated logistical support, which effectively delivers over 40,000 sealing products to customers worldwide.

Facilities are certified to ISO 9001:2000 and ISO/TS 16949:2002, with many manufacturing sites also working to QS9000 and VDA 6.1. Busak+Shamban, as the global sales and marketing organisation of Trelleborg Sealing Solutions, is backed by the experiences and resources of one of the world's foremost experts in polymer technology, Trelleborg AB.

**ISO 9001:2000**

**ISO/TS 16949:2002**

The information in this brochure is intended to be for general reference purposes only and is not intended to be a specific recommendation for any individual application. The application limits for pressure, temperature, speed and media given are maximum values determined in laboratory conditions. In application, due to the interaction of operating parameters, maximum values may not be achieved. It is vital therefore, that customers satisfy themselves as to the suitability of product and material for each of their individual applications. Any reliance on information is therefore at the user's own risk. In no event will Busak+Shamban be liable for any loss, damage, claim or expense directly or indirectly arising or resulting from the use of any information provided in this brochure. While every effort is made to ensure the accuracy of information contained herewith, Busak+Shamban cannot warrant the accuracy or completeness of information.

## ■ Choice of the Sealing Element

Sealing elements have a decisive influence on the design, function and service life of hydraulic and pneumatic cylinders and systems.

This applies equally to the piston seals where leak tightness, resistance to wear and gap extrusion, resistance to process media, resistance to high and low temperatures, low friction, compact form and simple installation are demanded in order to meet the requirements of industry for a functional sealing solution.

The significance of these parameters and their limits is generally dependent on the requirements of the specific application. B+S has therefore developed a complete range of seals which, due to their optimized geometries and designs and the use of high-quality materials such as Turcon<sup>®</sup> and Zurcon<sup>®</sup>, satisfy the technical and economic demands of the industry in full.

In order to be in a position to select the most appropriate seal type and material, it is necessary to first define all the desired functional parameters. Table I can then be used to make an initial selection of seals according to the specific requirements of the application.

The second column of the table contains the number of the page on which further general information together with specific design and installation instructions on the particular seal type and materials (or material combinations with multi-element seals, e.g. Turcon<sup>®</sup> Glyd Ring<sup>®</sup> T) can be found.

Furthermore, attention is drawn to the quality of the mating surface. We recommend that the limits specified there be observed, as they have a decisive influence on the functionality and service life of the system.

The final choice of seal type and material must also take account of the detailed information on the seal elements.

Please do not hesitate to contact our Technical Department for further information on specific applications and special technical questions.

This Catalogue is a compilation of the preferred product ranges of Busak+Shamban, Sealing Parts and POLYPAC. All similar products are technically equivalent but availability and pricing may vary. For further information please contact your local Busak+Shamban company.

## Note on Ordering

All multi-element standard piston seals, e.g. Glyd Ring<sup>®</sup> T, are generally supplied as complete seal sets. The supply includes the seal and matching elastomer energizing elements. The O-Ring does not have to be ordered separately. It is also possible to use other O-Ring materials from our O-Ring catalogue. In this case, please order the seal ring and O-Ring separately. We will inform you the sizes of the O-Ring on request.

When ordering the seal ring separately, it is then not necessary to mention the "O-Ring material code" in the Order No. shown in the ordering examples.

Older designs of seals no longer contained in this catalogue naturally continue to be available (see chapter Non Standard Seals). For all new applications, however, we recommend the use of the seal types and preferred sizes (ISO series, wherever possible) listed in this catalogue.

Other combinations of Turcon<sup>®</sup> materials and special designs can be developed and supplied for special applications in all intermediate sizes up to 2.700 mm diameter, provided there is sufficient demand.

The sizes contained in this catalogue are generally available from stock or can be supplied at short notice. We reserve the right to modify our supply programme.

# Piston Seals

## Design Instructions

### Lead in chamfers

Piston seals are always fitted with an interference fit. In order to avoid damage during installation, lead-in chamfers and rounded edges must be provided on the cylinder barrel (Figure 1). If this is not possible for design reasons, a separate installation tool must be used.

The minimum length of the lead-in chamfer depends on the profile size of the seal and can be seen from the following tables.

Generally  $\Delta D_N$  min. from Table II, III and IV is recommended but  $\Delta D_N$  must also exceed  $0.015 \times$  bore diameter  $D_N$  (relevant for big diameter cylinders).

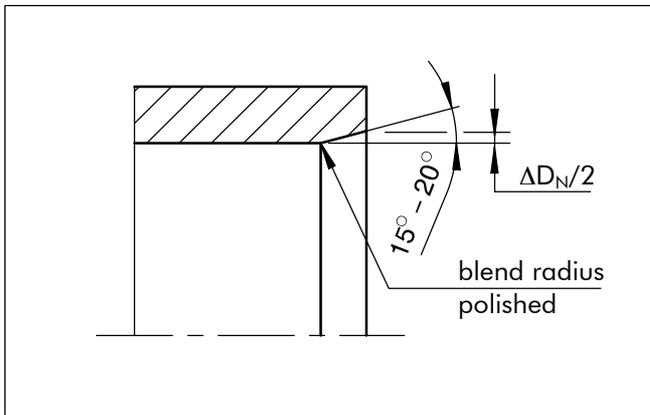

Figure 1 Lead-in chamfer

Table II Elastomer Energized Seals

Lead-in Chamfer Diameter increase $\Delta D_N$ min.	Groove Width L1*
1.1	2.2
1.4	3.2
1.9	4.2
2.7	6.3
3.5	8.1
4.0	9.5
5.5	13.8

\* The groove width can be found in table "Installation dimensions" for Turcon® Glyd Ring®, Turcon® Glyd Ring® T, Turcon® AQ-Seal® 5, Turcon® Stepseal® 2K, Turcon® Stepseal® K, Zurcon® Wynseal and Turcon® AQ-Seal®.

Table III Compact Seal and Variseal®

Lead-in Chamfer Diameter increase $\Delta D_N$ min.	Compact Seal Groove Depth*	Turcon® Variseal® M2 Series

3.5	7.00	8.40

\* Though not less than 1.5 % of service diameter (bore/rod diameter).

\*\*The O-Ring cross section  $d_2$  can be found in the appropriate table "Installation Dimensions", from chapter Double Delta®.

# Piston Seals

## Surface Roughness DIN EN ISO 4287

The functional reliability and service life of a seal depend to a very great extent on the quality and surface finish of the mating surface to be sealed.

Scores, scratches, pores, concentric or spiral machining marks are not permitted. Higher demands must be made on the surface finish of dynamic surfaces than of static mating surfaces.

The characteristics most frequently used to describe the surface microfinish  $R_a$ ,  $R_z$  and  $R_{max}$  are defined in DIN EN ISO 4287. These characteristics alone, however, are not sufficient for assessing the suitability in seal technology. In addition the material contact area of the surface roughness profile  $R_{mr}$  in accordance with DIN EN ISO 4287 should be demanded. The significance of this surface specification is illustrated in Fig. 2. It shows clearly that specification of  $R_a$  and  $R_z$  alone does not describe the surface roughness profile accurately enough for the seal technology and is thus not sufficient for assessing the suitability. The material contact area  $R_{mr}$  is essential for assessing surfaces, as this parameter is determined by the specific surface roughness profile. This in turn is directly dependent on the machining process employed.

Busak+Shamban recommends that the following surface finishes be observed:

**Table V Surface Roughness**

Surface Roughness $\mu\text{m}$			
Parameter	Mating Surface		Groove Surface
	Turcon <sup>®</sup> Materials	Zurcon <sup>®</sup> and Rubber	
$R_{max}$	0.63 - 2.50	1.00 - 4.00	< 16.0
$R_z$ DIN	0.40 - 1.60	0.63 - 2.50	< 10.0
$R_a$	0.05 - 0.20	0.10 - 0.40	< 1.6

The material contact area  $R_{mr}$  should be approx. 50 to 70%, determined at a cut depth  $c = 0.25 \times R_z$ , relative to a reference line of  $C_{ref}$ . 5%.

Surface profile	$R_a$	$R_z$	$R_{mr}$
closed profile form 	0.1	1.0	70%
open profile form 	0.2	1.0	15%

Figure 2 Profile forms of surfaces

Figure 2 shows two surface profiles, both of which exhibit nearly the same value for  $R_z$  in the test procedure. The difference becomes obvious only when the material contact area of the surface roughness profiles are compared. These show that the upper roughness profile with  $R_{mr} = 70\%$  has the better seal/mating surface ratio.

# Piston Seals

## ■ Installation of Piston Seals

### General Installation Instructions

The following points should be observed before installation of the seals:

- Ensure the cylinder tube has a lead in chamfer; if not, use an installation sleeve
- Deburr and chamfer or round sharp edges, cover the tips of screw threads
- Remove machining residues such as chips, dirt and other foreign particles and carefully clean all parts
- The seals can be installed more easily if they are greased or oiled. Attention must be paid to the compatibility of the seal materials with these lubricants. Use only grease without solid additives (e.g. molybdenum disulphide or zinc sulphide).
- Use no sharp-edged installation tools

### Installation in Split Grooves

Installation in split grooves is simple. The sequence of installation corresponds to the configuration of the seal. Individual seal elements must not be allowed to twist. During final installation (installation of the piston in the cylinder), elastomer or spring-preloaded seals must be sized. The corresponding cylinder barrel can be used for this purpose, provided it has a long lead-in chamfer. Alternatively, a sizing sleeve should be used.

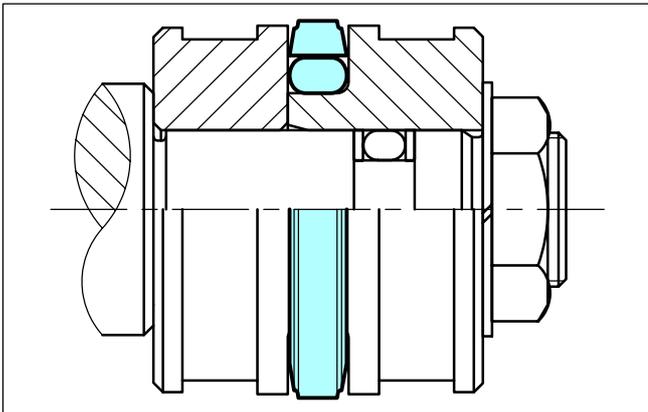

Figure 3 Installation in a split groove

### Installation in Closed Grooves

- Without installation aids

Observing the instructions in the chapter "General installation instructions", installation of Compact Seal and Wynseal seal elements in closed grooves is relatively simple.

For Turcon® and Zurcon® seals, the use of installation aids is recommended. If installation has to be performed without installation aids, however, the following points should be observed:

Turcon® seals can be installed more easily by heating in oil, water or using a hot air fan to approx. 80°C to 100°C (expanding and then shrinking back to the original form).

Use no sharp edged tools to expand the seal rings.

Sizing of the seal ring is achieved with a separate sizing sleeve, or with the cylinder tube provided this has lead-in chamfers equivalent to 2 x the values from Table II.

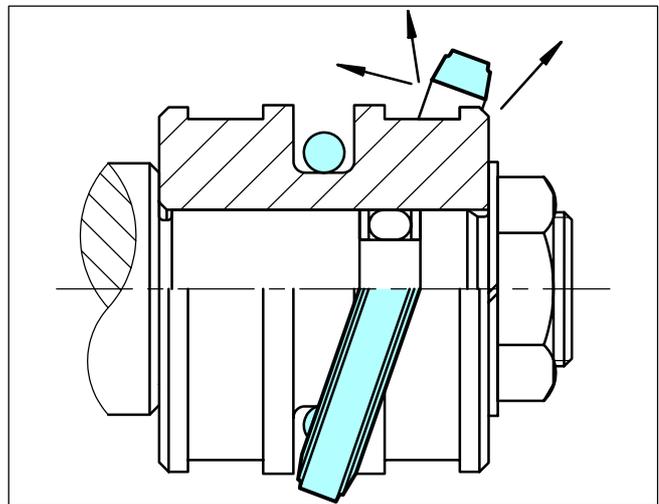

Figure 4 Fitting the seal ring onto the O-Ring in the groove

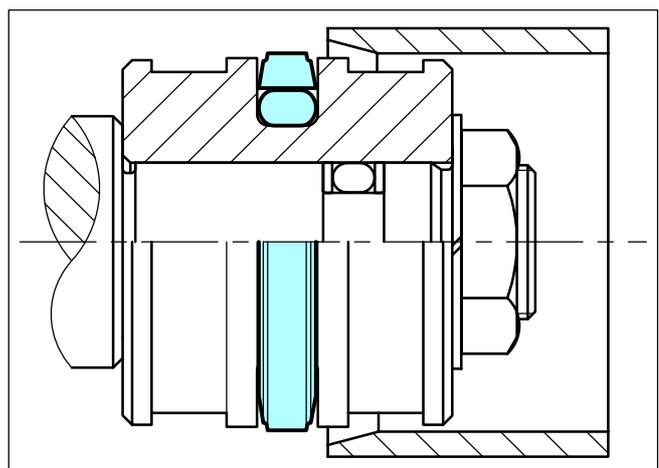

Figure 5 Sizing of the installed seal

# Piston Seals

## Installation in Closed Grooves

- With installation aids

Use of a three-piece installation tool is recommended for the series production installation of Turcon® and Zurcon® seal elements. The tool consists of:

- Installation sleeve
- Expanding sleeve
- Sizing sleeve

All these parts should be made of a polymer material (e.g. PA6) with good sliding characteristics and low abrasiveness to avoid damage to the seals.

In view of the wide range of sizes and the application-specific installation conditions, these installation tools cannot be supplied as standard by Busak+Shamban.

On request, however, we will gladly provide specimen drawings to allow you to manufacture these tools.

The sequence of installation is illustrated in Fig. 6 to 8. Note, however, that the installation of Turcon® seal elements should be performed quickly in order to ensure optimum recovery of the seal ring.

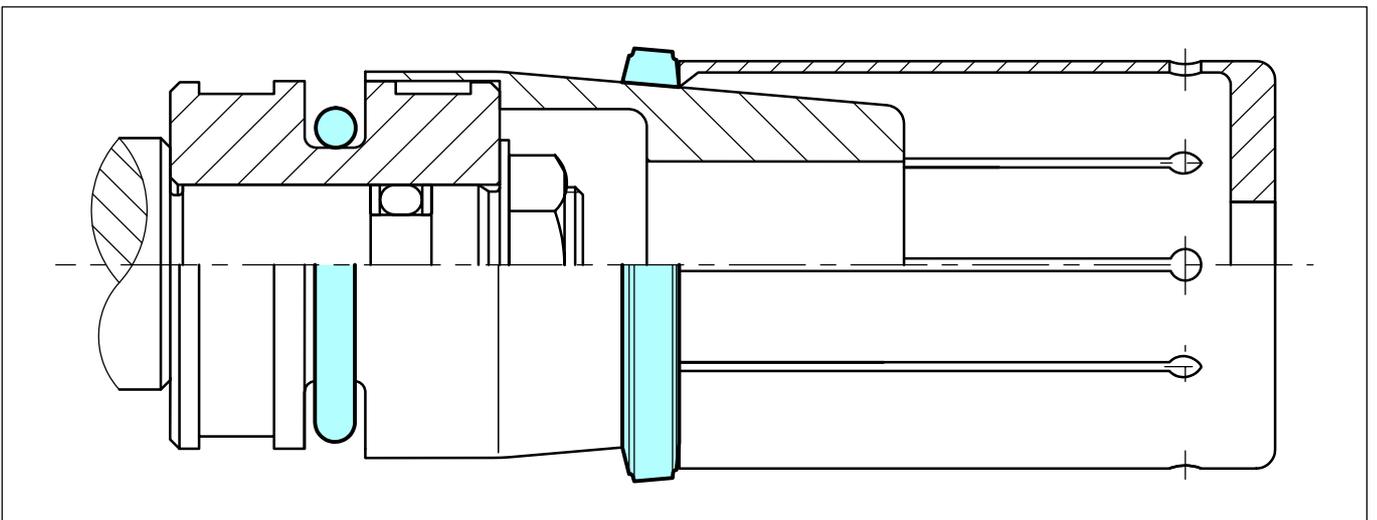

Figure 6 Expanding the Turcon® or Zurcon® sealing element using an expanding sleeve over the installation sleeve

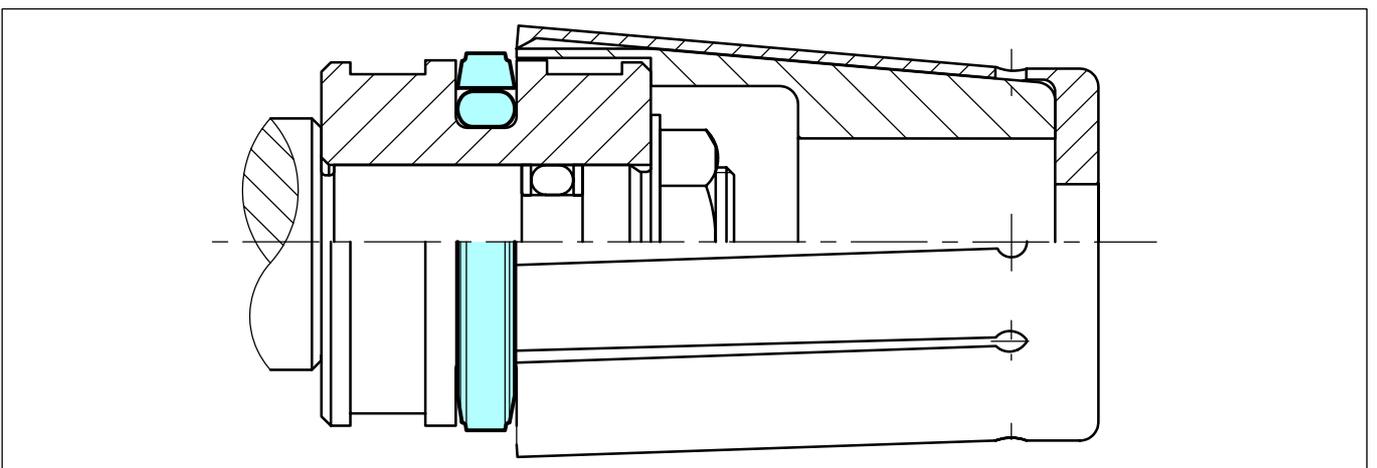

Figure 7 Sealing element after snapping into the groove

## Piston Seals

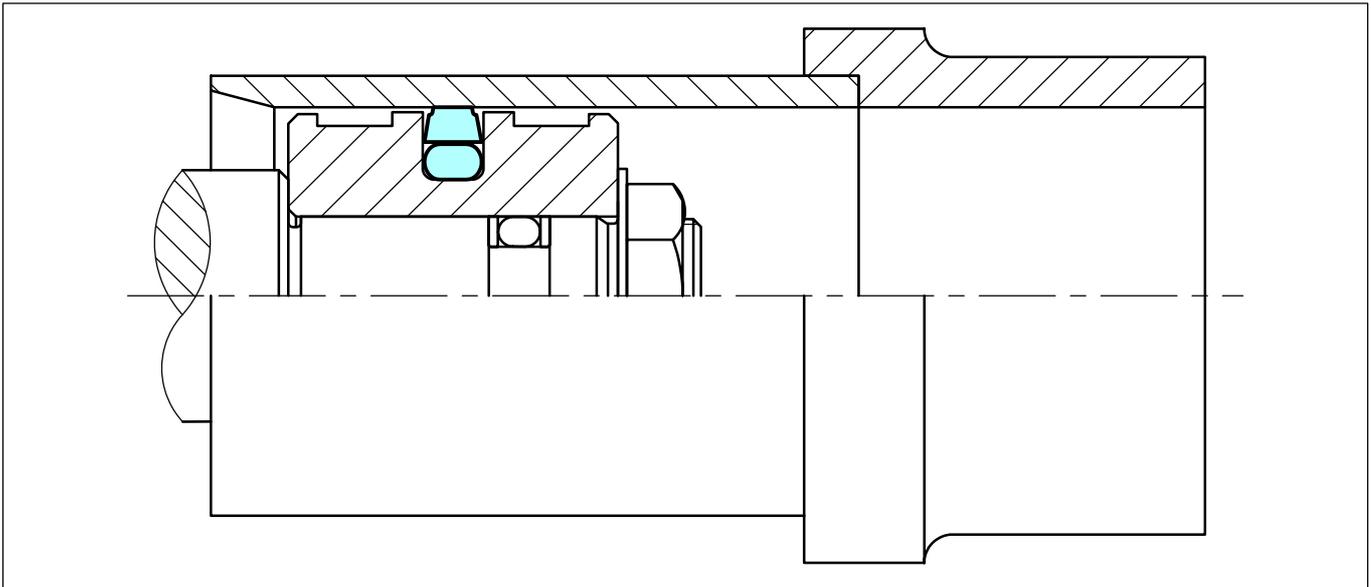

Figure 8 Sizing the sealing element with sizing sleeve

### Installation of Turcon® Double Delta®

Installation in closed grooves is possible from 8 mm bore diameter. For diameters smaller than 50 mm a loading mandrel (Fig. 9) is recommended. After installation the seal must be calibrated, this may be done with the lead-in chamfer of the cylinder tube or by means of a separate calibration sleeve.

- Turcon® piston seals can be installed more easily by heating to approx. 80°C to 100°C (expanding and then shrinking back to the original form).

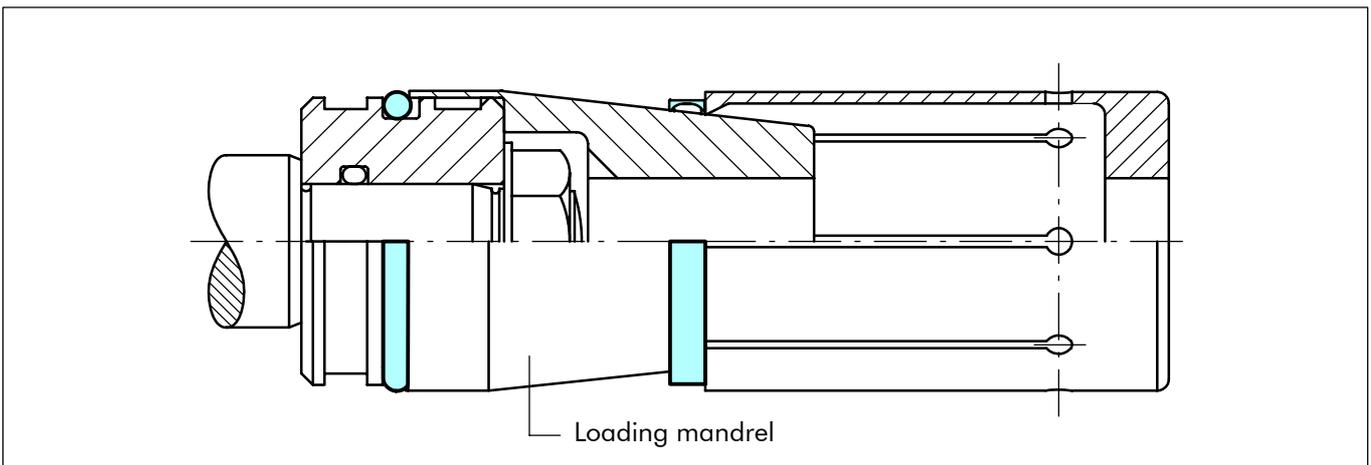

Figure 9 Installation in a closed groove

# Piston Seals

## Installation of Spring Energized Seals

Turcon® Variseal® seals should preferably be installed in split grooves. Installation in half-open grooves is possible with a snap fitting. Figure 10 shows the design of the groove.

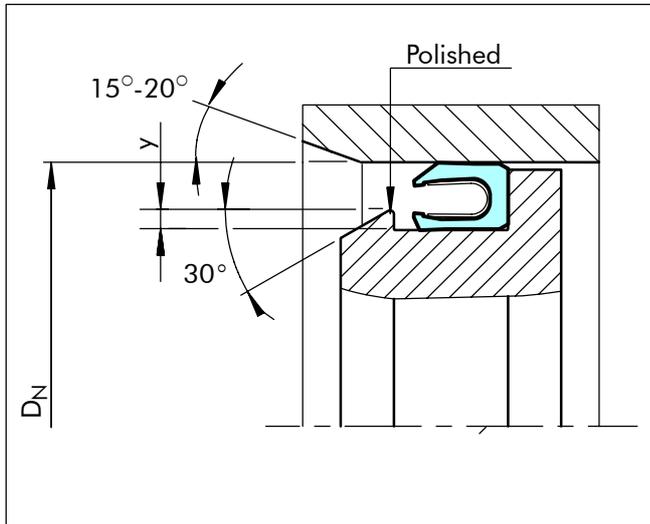

Figure 10 Installation in a half-open groove

Table VI Installation in Half-Open Grooves

Series No.	$D_N$ min.	$Y$ min.
PVA0	15.0	0.4
PVA1	21.0	0.6
PVA2	25.0	0.7
PVA3	30.0	0.8
PVA4	45.0	0.9
PVA5	65.0	0.9

For further details, see chapter Turcon® Variseal®.

In exceptional cases or with existing designs, an installation in closed grooves is also possible. The details in Table VII should be regarded as guide values for installation.

Table VII Installation in closed grooves

Series No.	$D_N$ min.
PVA0	35.0
PVA1	50.0
PVA2	70.0
PVA3	105.0
PVA4	140.0
PVA5	220.0

## Installation of the Compact Seal

The Compact Seal can be installed in one-piece or split pistons. On one-piece pistons, the inner rubber-elastic sealing element is first installed in the middle of the groove diameter by expanding over the piston. Then the cut Back-up Ring are fitted on both sides of the sealing element and then the two cut guide rings are installed.

On split pistons the individual parts are installed in the following order: Guide ring, Back-up Ring, sealing element, Back-up Ring, Guide ring.

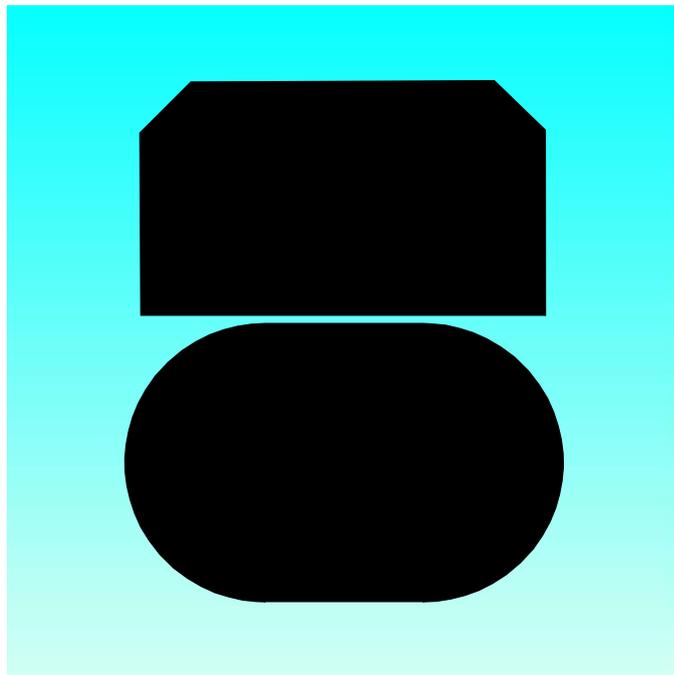

Before installation all seal parts, including piston and cylinder, should be oiled or greased.

# **TURCON<sup>®</sup> GLYD RING<sup>®</sup>**

**- Double Acting -**

**- Rubber Energised Plastic Faced Seal -**

**- Material -**

**- Turcon<sup>®</sup>, Zurcon<sup>®</sup> and Elastomer -**

## ■ Turcon® Glyd Ring®

### Description

Successfully used for decades, the Turcon® Glyd Ring® is a very effective and reliable low frictional seal. It is particularly suitable as a piston seal in both high and low pressure systems.

The double acting Turcon® Glyd Ring® is a combination of a Turcon® based slipper seal and an energising O-Ring. It is produced with an interference fit which together with the squeeze of the O-Ring ensures a good sealing effect even at low pressure. At higher system pressures, the O-Ring is energised by the fluid, pushing the Turcon® Glyd Ring® against the sealing face with increased force.

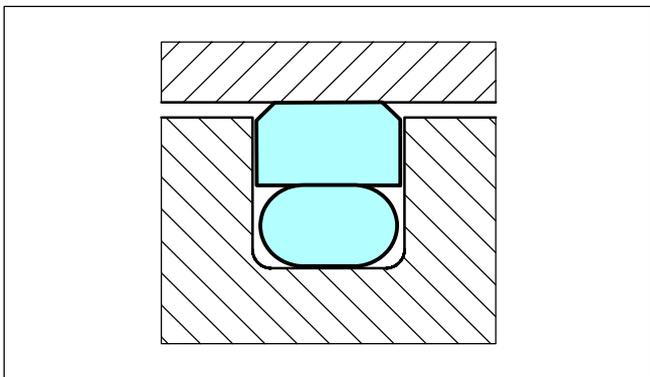

Figure 11 Turcon® Glyd Ring®

The geometry of the Turcon® Glyd Ring® ensures a good static sealing and allows the lubricating hydrodynamic oil film to be built under the seal in reciprocating applications.

### Notches

To assure that a rapid energising of the seal takes place at sudden changes of pressure and direction of motion, radial "notches" are machined on both sides of the seal.

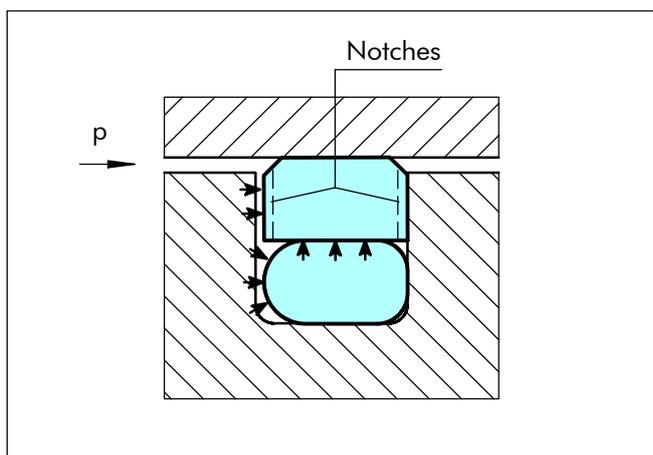

Figure 12 Turcon® Glyd Ring® with notches

Notches are standard on the following series and diameters

PG 42 for bore dia. > 30mm

PG 44 for bore dia. > 20mm

PG 46 for bore dia. > 40mm

### Advantages

- No stick-slip effect when starting for smooth operation
- Minimum static and dynamic friction coefficient for a minimum energy loss and operating temperature
- Suitable for non lubricating fluids depending on seal material for optimum design flexibility
- High wear resistance ensures long service life
- Installation grooves acc. to ISO 7425/1
- No adhesive effect to the mating surface during long period of inactivity or storage
- Suitable for most hydraulic fluids in relation with most modern hardware materials and surface finish depending on material selected.
- Suitable for new environmentally safe hydraulic fluids
- Available for all cylinder diameters up to 2.700 mm.

### Application Examples

Over several decades the Turcon® Glyd Ring® has been successfully implemented in a lot of applications as double acting Piston seals of hydraulic components such as:

- Injection moulding machines
- Machine tools
- Presses
- Excavators
- Forklifts & handling machinery
- Agriculture equipment
- Valves for hydraulic & pneumatic circuits.

## Technical Data

Operating conditions:

The Turcon<sup>®</sup> Glyd Ring<sup>®</sup> is recommended for reciprocating (with a length of stroke at least twice the groove width) and helical movements.

Pressure: up to 80MPa

Speed: up to 15m/s

Frequency: up to 5 Hz.

Temperature: -45°C to +200°C \*)  
(depending on O-Ring Material)

Media: Mineral oil based hydraulic fluids, barely flammable hydraulic fluids, environmentally safe hydraulic fluids (biological degradable oils), water, air and others. Depending on the O-Ring material compatibility.

Clearance: the maximum permissible radial clearance  $S_{max}$  is shown in the table IX, as a function of the operating pressure and functional diameter.

### Important Note:

The above data are maximum values and cannot be used at the same time. e.g. the maximum operating speed depends on material type, pressure, temperature and gap value. Temperature range also dependent on medium.

\*) In the case of unpressurized applications in temperatures below 0°C please contact our application engineers for assistance !

## Materials

### Standard Application:

- For hydraulic components in mineral oils containing zinc or medium with good lubricating performance.

Turcon<sup>®</sup> seal: Turcon<sup>®</sup> T 46

Energiser: O-Ring NBR 70 shore A or FKM 70 Shore A depending on the temperature

Set reference. T46N or T46V

### Special Application:

- Short stroke movements, non-lubricating fluids or pneumatic applications require self-lubricating sealing materials. Therefore we recommend:

Turcon<sup>®</sup> Seal: Turcon<sup>®</sup> T29

Energiser: O-Ring NBR 70 Shore A or FKM 70 Shore A depending on the temperature

Set reference: T29N or T29V

- If low friction coefficient is required, we recommend:

Turcon<sup>®</sup> Seal: Turcon<sup>®</sup> T 05

Energiser: O-Ring NBR 70 Shore A or FKM 70 Shore A depending on the temperature.

For special requirements other elastomers are available on request

Set reference: T05N or T05V

If rougher surface finish must be sealed, we recommend:

Zurcon<sup>®</sup> Seal: Zurcon<sup>®</sup> Z51

Energiser: O-Ring NBR 70 Shore A

Set reference: Z51N

<b>Turcon® T42</b> For all lubricating and non-lubricating hydraulic fluids, good chemical resistance, <b>good dielectric properties.</b> Glass fibre filled + MoS <sub>2</sub> Colour: Grey to blue	T42	NBR - 70 Shore A	N	-30 to +100	Steel tubes Steel, hardened Cast iron	30
		NBR - Low temp. 70 Shore A	T	-45 to +80		
		FKM - 70 Shore A	V	-10 to +200		
<b>Turcon® T10</b> For oil hydraulic and pneumatic, for all lubricating and non-lubricating fluids, high extrusion resistance, good chemical resistance, BAM tested. Carbon, graphite filled Colour: Black	T10	NBR - 70 Shore A	N	-30 to +100	Steel Stainless steel	60
		NBR - Low temp. 70 Shore A	T	-45 to +80		
		FKM - 70 Shore A	V	-10 to +200		
		EPDM-70 Shore A	E**	-45 to +145		
<b>Zurcon® Z51***</b> For lubricating hydraulic fluids, <b>high abrasion resistance, high extrusion resistance</b> , limited chemical resistance. Cast polyurethane Colour: Yellow to light-brown	Z51	NBR - 70 Shore A	N	-30 to +100	Steel Steel, hardened Cast iron Ceramic coating Stainless steel	80
		NBR - Low temp. 70 Shore A	T	-45 to +80		
<b>Zurcon® Z80</b> For lubricating and non-lubricating hydraulic fluids, high abrasion resistance, very good chemical resistance, limited temperature resistance. Ultra high molecular weight polyethylen Colour: White to off-white	Z80	NBR - 70 Shore A	N	-30 to +80	Steel Stainless steel Aluminium Bronze Ceramic coating	40
		NBR - Low temp. 70 Shore A	T	-45 to +80		

\* The O-Ring Operation Temperature is only valid in mineral hydraulic oil. BAM: Tested by "Bundes Anstalt Materialprüfung, Germany".

Highlighted materials are standard. \*\*Material not suitable for mineral oils. \*\*\* max. Ø 2300 mm

■ Installation Recommendations

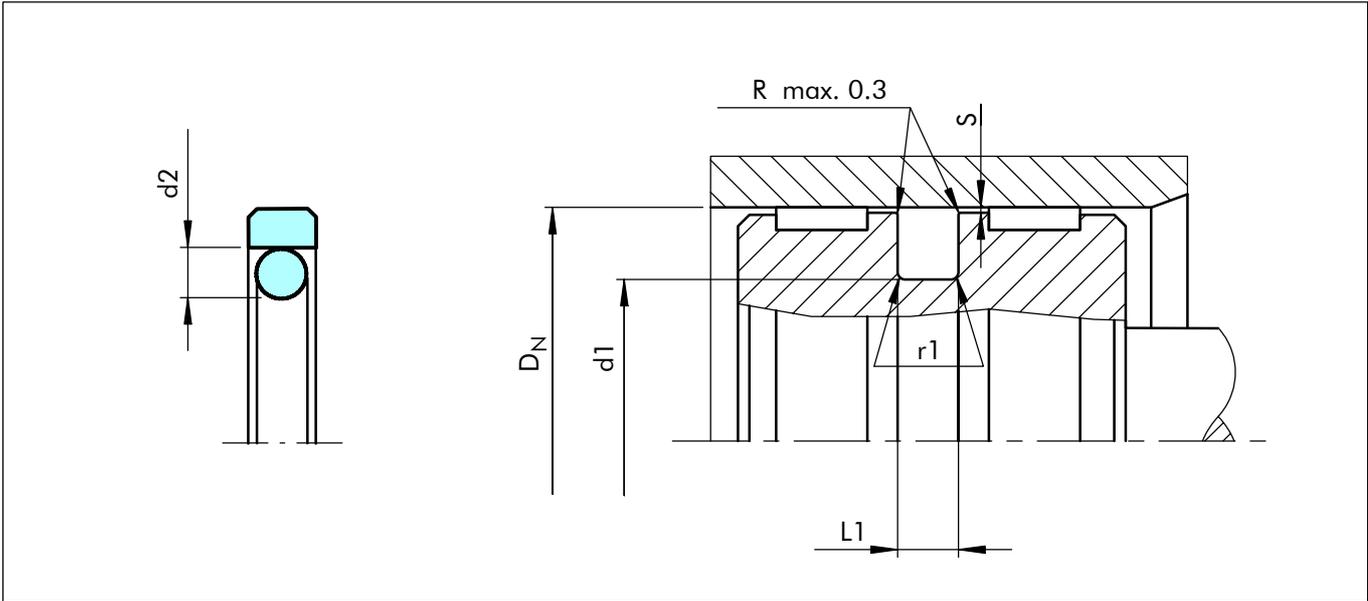

Figure 13 Installation drawing

Table IX Installation Dimension

Bore Diameter $D_N$ H9			Groove Diameter	Groove Width	Radius	Radial Clearance			O-Ring Cross-Section $d_2$
Series No. PG 44	Series No. PG 46	Series No. PG 42				S max.*

670 - 999.9	-	330 - 669.9	$D_N - 28.0$	9.5	2.5	0.70	0.50	0.30	8.40
> 1000			$D_N - 38.0$	13.8	3.0	1.00	0.70	0.60	12.00

\* At pressures > 40 MPa use diameter tolerance H8/f8 (bore/piston) in area of the seal.

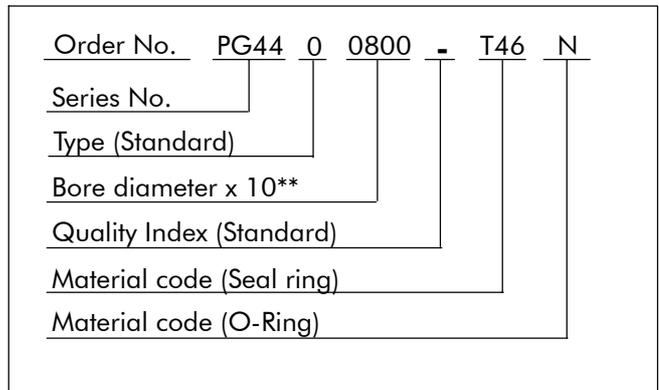

Ordering Example

Turcon® Glyd Ring®, complete with O-Ring, standard application, Series PG44 (from Table IX ).  
 Bore diameter:  $D_N = 80.0$  mm  
 Part No.: PG4400800 (from Table X)

Select the material from Table VIII. The corresponding code numbers are appended to the Part No. Preferred Series (Table X).

Together they form the order number. The order number for all intermediate sizes not shown in Preferred Series (Table X) can be determined following the example opposite.

\*\* For diameters  $D_N \geq 1000.0$  mm multiply only by factor 1.  
 Example: PG44 for diameter  $D_N$  1200.0 mm.  
 Order no.: PG44X1200 - T46N.

## ■ Turcon® Glyd Ring® T \*

### Description

Turcon® Glyd Ring® T is a further technical development of the Turcon® Glyd Ring® seal which has been successfully used for decades. It is fully interchangeable with the earlier Glyd Ring® seals in all new applications. Glyd Ring® T meets all the market demands for a function-specific seal solution, observing economic and ecological aspects.

The benefits of the patented seal concept are provided by the innovative functional principle of the trapezoidal profile cross-section.

Both lateral profile flanks are inclined so that the seal profile tapers towards the seal surface. The profile can thus retain the robust and compact form typical of piston seals without losing any of the flexibility required to achieve a pressure-related maximum compression (Figure 14).

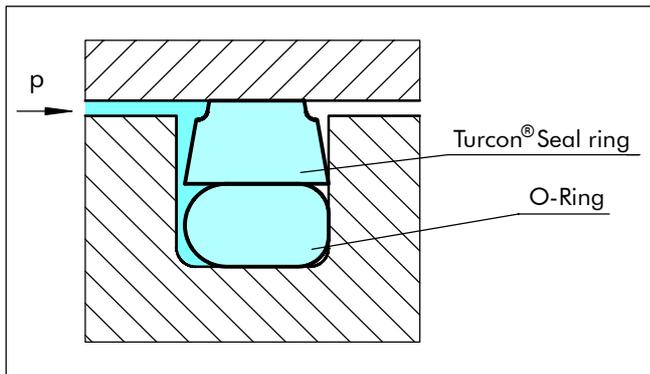

Figure 14 Turcon® Glyd Ring® T

The edge angle created by the special Glyd Ring® T cross-sectional form permits an additional degree of freedom and enables a slight tilting movement of the seal. The maximum compression is thus always shifted towards the area of the seal edge directly exposed to the pressure. On the low-pressure edge of the seal, on the other hand, the Glyd Ring® T exhibits only zones with neutral strains without compressive or shearing loads, thus effectively reducing the danger of gap extrusion. The resulting benefits for the user can be seen in the following list.

\* Patent-No.:

DE 41 40833 C3

EP 0 582 593

Japan 2 799 367

USA 5,433,452

### Advantages

The benefits offered to date by the Glyd Ring® are still retained in full, and are now complemented by a number of further important advantages:

- Very good static leak-tightness
- Increased clearance possible (approx. +50%), depending on the operating conditions
- Due to the larger extrusion gap, safe use even with soiled media
- Low friction, no stick-slip effect
- Simple groove design, one-piece pistons possible
- Installation grooves to ISO 7425/1
- Adaptable to the operating conditions due to a wide range of possible materials (Turcon®, Zurcon®)
- Suitable for new environmentally safe hydraulic fluids
- Available for all cylinder diameters up to 2.700 mm.

### Application Examples

The Turcon® Glyd Ring® T is the recommended sealing element for double acting pistons of hydraulic components such as:

- Injection moulding machines
- Machine tools
- Presses
- Excavators
- Forklifts & handling machinery
- Agriculture
- Valves for hydraulic & pneumatic circuits.

It is particularly recommended for heavy duty and large diameter applications.

# Turcon<sup>®</sup> Glyd Ring<sup>®</sup> T

## Technical Data

Operating conditions

pressure: Up to 80 MPa

Speed: Up to 15 m/s

Temperature: -45°C to +200°C \*)  
(depending on O-Ring material).

Media: Mineral oil-based hydraulic fluids, barely flammable hydraulic fluids, environmentally safe hydraulic fluids (bio-oils), water, air and others, depending on the O-Ring material (see Table XI)

Clearance: The maximum permissible radial clearance  $s_{max}$  is shown in Table XII, as a function of the operating pressure and functional diameter.

### Important Note:

The above data are maximum values and cannot be used at the same time. e.g. the maximum operating speed depends on material type, pressure, temperature and gap value. Temperature range also dependent on medium.

\*) In the case of unpressurized applications in temperatures below 0°C please contact our application engineers for assistance !

## Materials

### Standard Application:

- For hydraulic components with reciprocating movement in mineral oils containing zinc or medium with good lubricating performance.

Turcon<sup>®</sup> Seal: Turcon<sup>®</sup> T46

Energiser: O-Ring NBR 70 shore A or FKM 70 Shore A depending on the temperature

Set reference: T46N or T46V

### Special Application:

- Non-lubricating fluids or pneumatic applications require self-lubricating sealing materials. Therefore we recommend:

Turcon<sup>®</sup> Seal: Turcon<sup>®</sup> T40

Energiser: O-Ring NBR 70 Shore A or FKM 70 Shore A depending on the temperature

Set reference: T40N or T40V

- If rougher surface finish must be sealed, we recommend:

Zurcon<sup>®</sup> Seal: Zurcon<sup>®</sup> Z51

Energiser: O-Ring NBR 70 Shore A

Set reference: Z51N

**Table XI Turcon<sup>®</sup> and Zurcon<sup>®</sup> Materials for Glyd Ring<sup>®</sup> T**

Material, Applications, Properties	Code	O-Ring Material	Code	O-Ring Operating Temp.* °C	Mating Surface Material	MPa max.
<b>Turcon<sup>®</sup> T46</b> <b>Standard material</b> for hydraulics, high compressive strength, good sliding and wear properties, good extrusion resistance, <b>BAM tested.</b> Bronze filled Colour: Greyish to dark brown	T46	NBR - 70 Shore A	N	-30 to +100	Steel tubes Steel, hardened Cast iron	60
		NBR - Low temp. 70 Shore A	T	-45 to +80		
		FKM - 70 Shore A	V	-10 to +200		
<b>Turcon<sup>®</sup> T40</b> For all lubricating and non-lubricating hydraulic fluids, hydraulic oils without zinc, <b>water hydraulic, soft mating surfaces, good extrusion resistance.</b> Surface texture not suitable for gases. Carbon fibre filled Colour: Grey	T40	NBR - 70 Shore A	N	-30 to +100	Steel Cast iron Stainless steel Aluminium Bronze Alloys	25
		NBR - Low temp. 70 Shore A	T	-45 to +80		
		FKM - 70 Shore A	V	-10 to +200		
		EPDM - 70 Shore A	E**	-45 to +145		
<b>Zurcon<sup>®</sup> Z51***</b> For lubricating hydraulic fluids, <b>high abrasion resistance, high extrusion resistance</b> , limited chemical resistance. Cast polyurethane Colour: Yellow to light-brown	Z51	NBR - 70 Shore A	N	-30 to +100	Steel Steel, hardened Cast iron Ceramic coating Stainless steel	80
		NBR - Low temp. 70 Shore A	T	-45 to +80		

\* The O-Ring Operation Temperature is only valid in mineral hydraulic oil. BAM: Tested by "Bundes Anstalt Materialprüfung, Germany".

Highlighted materials are standard. \*\*Material not suitable for mineral oils. \*\*\* max. Ø 2300 mm

■ Installation Recommendation

PT06**	$\geq 1000$			$D_N-38.0$	13.8	3.0	1.20	0.90	0.70	12.00

\* At pressures > 40 MPa use diameter tolerance H8/f8 (bore/piston) in area of the seal.

\*\* PT06 energiser has a special shape.

Ordering example

Turcon® Glyd Ring® T, complete with O-Ring, standard application, series PT03 (from Table XII).

Bore diameter:  $D_N = 80.0$  mm

Part No.: PT0300800 (from Table XIII)

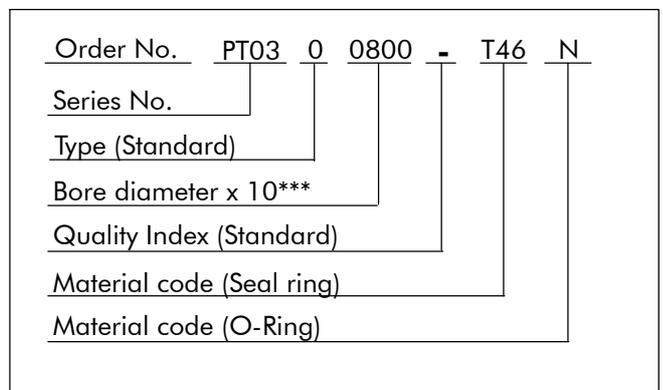

Select the material from Table XI. The corresponding code numbers are appended to the Part No. (from Table XIII). Together they form the Order No.

For all intermediate sizes not shown in Table XIII, the Order No. can be determined from the example opposite.

\*\*\* For diameters  $\geq 1000.0$  mm multiply only by factor 1.

Example: PT06 for diameter 1200.0 mm.

Order no.: PT06**X1200** - T46N.

## ■ Turcon® AQ-Seal® 5\*

### Description

The Turcon® AQ-Seal® 5 is a patented development of the proven standard Turcon® AQ-Seal®.

The seal profile of the Turcon® ring has been redesigned on both the dynamic and static sealing surface. Two O-Rings are used to energize the seal instead of one.

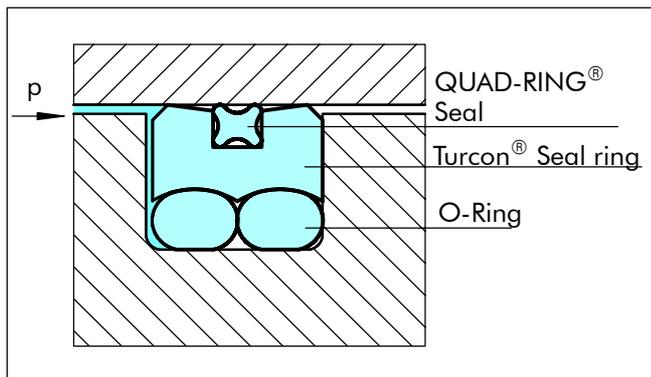

Figure 17 Turcon® AQ-Seal® 5

The AQ-Seal® 5 combines the benefits of a low-friction Turcon® slipper seal with the high sealing characteristics of an elastomeric seal by incorporating a limited foot print QUAD-RING® Seal in the dynamic sealing face. This optimizes leakage control while minimizing friction.

The particular characteristics of the AQ-Seal® 5 are the special seal profile with a defined seal edge and the use of two O-Rings as energizing elements to optimize the pressure profile and to reduce the force of attack at gas permeability.

\* Patent-No. EP 0 424 372

### Advantages

- High sealing effect in applications requiring media separation, e.g. fluid/fluid or fluid/gas
- Double security through the combination of low-friction special materials with elastomer seals
- Low gas permeation rate
- Higher pressure application, higher sliding speed compared to the AQ-Seal®
- Outstanding sliding properties, no stick-slip effect.

### Application Examples

The Turcon® AQ-Seal® 5 is the recommended sealing element for double acting pistons of accumulators and positioning and holding cylinders for:

- Machine tools
- Presses
- Rolling mills
- Off shore
- Accumulators
- Heavy duty suspension cylinders

It is particularly recommended for heavy duty and large diameter applications.

### Technical Data

Operating conditions

pressure: 60 MPa

Speed: Up to 3 m/s

Temperature: -30°C to +200°C \*)  
(depending on O-Ring and QUAD-RING® Seal material)  
(For applications at low temperatures below -30°C, please contact us).

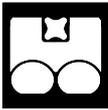

Media: For all common hydraulic fluids, including bio-oils and gases

Clearance: The maximum permissible radial clearance  $S_{max}$  is shown in Table XV, as a function of the operating pressure and functional diameter.

#### Important Note:

The above data are maximum values and cannot be used at the same time. e.g. the maximum operating speed depends on material type, pressure, temperature and gap value.  
Temperature range also dependent on medium.

\*) In the case of unpressurized applications in temperatures below 0°C please contact our application engineers for assistance !

## Materials

### Standard Application:

- For hydraulic components in mineral oils or medium with good lubricating performance.
- Mineral oils and gases

Turcon<sup>®</sup> Seal: Turcon<sup>®</sup> T46

Energiser: O-Ring and QUAD-RING Seal in NBR  
70 Shore A (code N)

### Special Application:

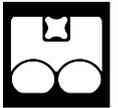

- For special applications requiring other material combinations, please contact your local Busak+Shamban Company.

# TURCON<sup>®</sup> AQ-SEAL<sup>®</sup>

**- Double Acting -**  
**- Rubber Energised Plastic Faced Seal -**

**- Material -**  
**- Turcon<sup>®</sup> and Elastomer -**

## ■ Turcon® AQ-Seal®

### Description

The Turcon® AQ-Seal® is a double-acting seal consisting of a seal ring of high-grade modified Turcon® material, a QUAD-RING® Seal and an O-Ring as energizing element.

The Turcon® seal ring and the QUAD-RING® Seal together assume the dynamic sealing function whilst the O-Ring performs the static sealing function.

### Design

The AQ-Seal® is supplied as standard with radial notches on both sides. These ensure direct pressurizing of the seal under all operating conditions.

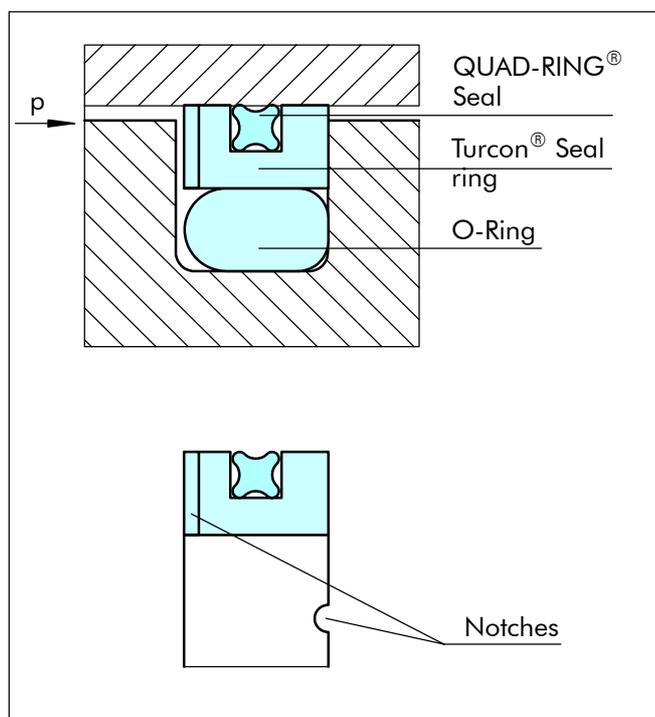

Figure 19 Turcon® AQ-Seal®

### Advantages

- High sealing effect in applications requiring media separation, e.g. fluid/fluid or fluid/gas
- Double security through the combination of low-friction special materials with elastomer seals
- Simple groove design, small installation space, interchangeable with Turcon® Glyd Ring®, Turcon® Glyd Ring® T and Turcon® Stepseal® K installation according to ISO 7425/1
- Outstanding sliding properties, no stick-slip effect.

### Application Examples

The Turcon® AQ-Seal® is the recommended sealing element for double acting pistons of accumulators and positioning and holding cylinders for:

- Machine tools
- Presses
- Accumulators
- Stabilisers
- Heavy duty suspension cylinders

### Technical Data

Operating pressure:	40 MPa
Speed:	Up to 2 m/s
Temperature:	-45°C to +200°C *) (depending on O-Ring and QUAD-RING® Seal material) (For applications at low temperatures below -30°C, please contact us).
Media:	For all common hydraulic fluids, including bio-oils and gases
Clearance:	The maximum permissible radial clearance $S_{max}$ is shown in Table XVIII, as a function of the operating pressure and functional diameter.

#### Important Note:

The above data are maximum values and cannot be used at the same time. e.g. the maximum operating speed depends on material type, pressure, temperature and gap value. Temperature range also dependent on medium.

\*) In the case of unpressurized applications in temperatures below 0°C please contact our application engineers for assistance !

## Materials

### Standard Application:

- For hydraulic components in mineral oils or medium with good lubricating performance.
- Mineral oils and gases

Turcon® Seal: Turcon® T46

Energiser: O-Ring and QUAD-RING® Seal in NBR 70 Shore A (code N)

### Special Application:

- For special applications requiring other material combinations, please contact your local Busak+Shamban Company.

### Ordering example

Turcon® AQ-Seal®, complete with O-Ring and QUAD-RING® Seal, recommended range, Series PQ22 (from Table XVIII).

Bore diameter:  $D_N = 80.0$  mm

Part No. PQ2200800 (from Table XIX)

Select the material from Table XVII. The corresponding code numbers are appended to the Part No. (from Table XIX). Together they form the Order No.

For all intermediate sizes not shown in Table XIX, the Order No. can be determined from the example opposite.

Order No.	PQ22	0	0800	-	T46	N

# **POLYPAC<sup>®</sup> PHD SEAL**

**- Double Acting -**

**- Heavy Duty, High Pressure -**

**- Material -**

**- PTFE, NBR Elastomer, POM -**

## PHD Seal

### Description

The PHD Seal is a high-pressure heavy-duty piston seal with excellent leakage control and superior extrusion and wear resistance

The PHD seal is a combination of a PTFE based slipper seal energised by an elastomer profile ring and completed with two Back-up rings (POM). It is manufactured with a predefined interference fit, which together with the squeeze of the elastomer part ensures a good sealing effect even at low system pressure. At higher pressures the elastomer part is energised by the system pressure and consequently activates the slipper seal in the radial direction.

The Back-up rings prevent the slipper seal from extrusion and ensure a long service life even under harsh conditions.

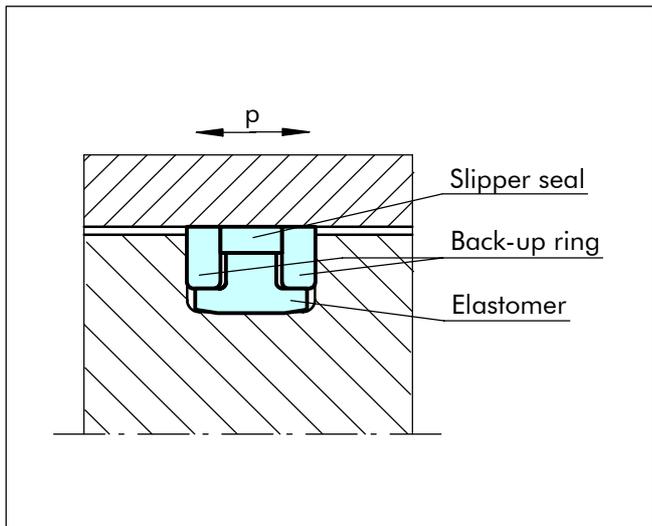

Figure 21 PHD Seal

### Advantages

- Simple groove design
- No stick-slip effect when starting for smooth operation
- Minimum static and dynamic coefficient of friction
- Increased clearance possible
- Due to larger extrusion gap, safe use even with soiled media
- Long service life

### Application Examples

The PHD Seal is the recommended sealing element for double acting pistons of hydraulic cylinders working in very harsh conditions such as:

- Excavators
- Heavy duty hydraulic cylinders

### Technical Data

Operating conditions

pressure: Up to 40 MPa  
Peak pressure up to 60 MPa

Speed: Up to 1.5 m/s

Temperature: -45°C to +135°C

Media: Mineral oil based hydraulic fluids, water/oil and glycol/oil emulsions

Clearance: The maximum permissible radial clearance  $S_{max}$  is shown in Table XXI, as a function of the operating pressure and functional diameter.

#### Important Note:

The above data are maximum values and cannot be used at the same time. e.g. the maximum operating speed depends on material type, pressure, temperature and gap value. Temperature range also dependent on medium.

### Materials

#### Standard Application:

For hydraulic components:

- In mineral oils or medium with good lubricating performance
- in water /oil and water/glycol emulsions

Slipper Seal: Bronze filled PTFE

Energiser: NBR 80 Shore A

Back-up rings: POM

Material code for the set: PTNO4

#### Special Application:

For special applications requiring other material combinations, please contact your local Busak+Shamban Company.

**Table XX Standard PTFE Based Materials for PHD Piston Seal**

Material, Applications, Properties	Code	Energiser Material	Code	Energiser Operating Temp.* °C	Mating Surface Material	MPa max.
<b>Material TR55</b> <b>Standard material</b> for hydraulics, good compressive strength, good sliding and wear properties, good extrusion resistance. Bronze filled Colour: Bronze to dark green	PT_04	NBR - 70 Shore A	N	-30 to +100	Steel tubes Steel, hardened Cast iron	40
		NBR - Low temp. 70 Shore A	T	-45 to +80

## Ordering Example

PHD Seal, complete.

Bore diameter:  $D_N = 80.0$  mm

Part No.: PKP000800 (from Table XXI)

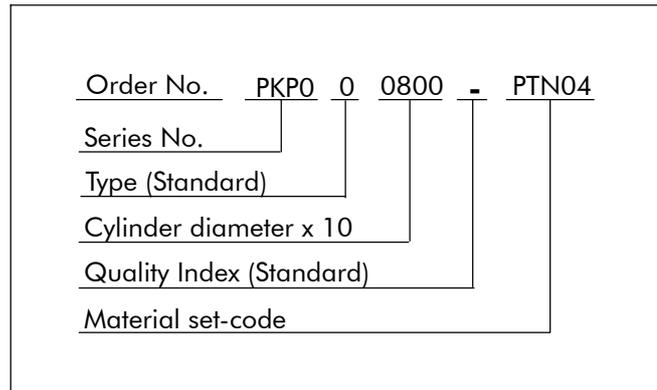

Seal: PTFE TR55

Energiser: NBR

Back-up ring: POM

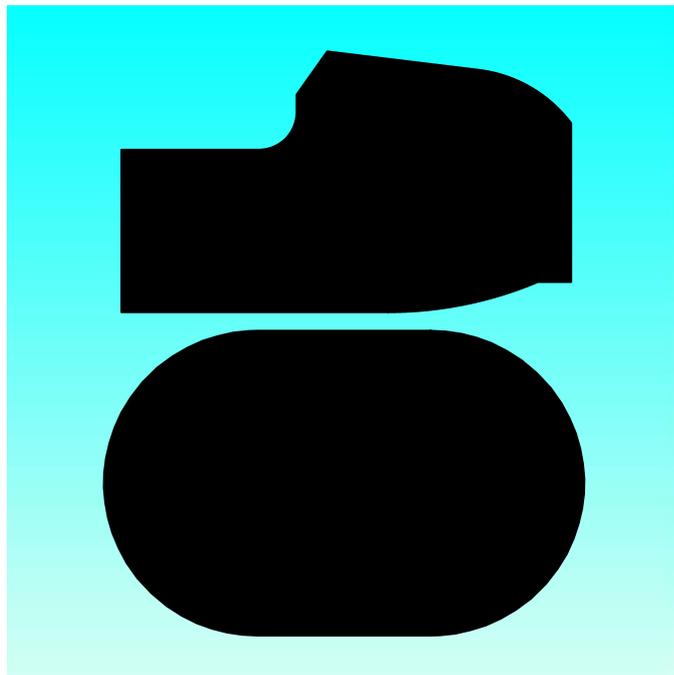

Material set-code: PTN04

Polypac Ref. No.: PHD 8065

---

# **TURCON<sup>®</sup> STEPSEAL<sup>®</sup> 2K**

**- Single Acting -**

**- Rubber Energised Plastic Faced Seal -**

**- Material -**

**- Turcon<sup>®</sup>, Zurcon<sup>®</sup> and Elastomer -**

## ■ Turcon® Stepseal® 2K\*

### Description

The Stepseal® 2K is a single-acting seal element consisting of a seal ring of high-grade Turcon® or Zurcon® materials and an O-Ring as energizing element.

The Stepseal® 2K was originally developed and patented by Busak+Shamban as a rod seal. Due to its outstanding properties, however, it is equally well suited as a single-acting piston seal where high demands are made on positional accuracy and free movement.

\* Patented and patent pending geometry

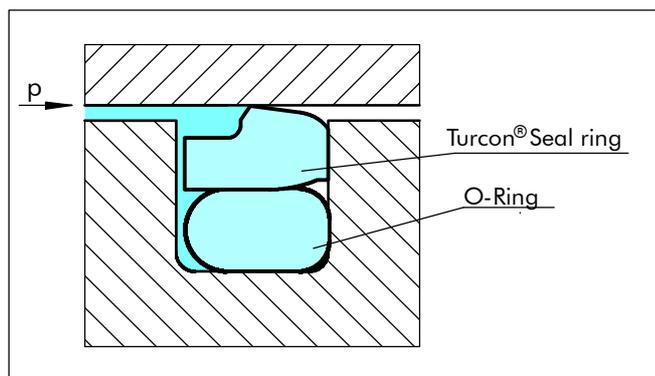

Figure 23 Turcon® Stepseal® 2K

### Advantages

- High static and dynamic sealing effect
- Stick-slip free operation for precise control
- High abrasion resistance and high resistance to extrusion
- Long service life
- Simple groove design, one-piece piston possible
- Wide range of application temperatures and high resistance to chemicals, depending on the choice of O-Ring material
- Simple installation without seal edge deformation
- Available for all diameters up to 2.700 mm
- Low friction

### Application Examples

The Turcon® Stepseal® 2K is the recommended sealing element for single acting pistons in hydraulic components for:

- Injection moulding machines
- Machine tools
- Presses

It is particularly recommended in floating piston accumulators as primary seal on the oil side in combination with AQ-Seal® and AQ-Seal® 5.

### Technical Data

Operating conditions	
pressure:	Up to 80 MPa
Speed:	Up to 15 m/s, frequency up to 5 Hz
Temperature:	-45°C to +200°C *)
Media:	Mineral oil-based hydraulic fluids, flame retardant hydraulic fluids, environmentally safe hydraulic fluids (bio-oils), water, air and others, depending on the O-Ring material (see Table XXIII)
Clearance:	The maximum permissible radial clearance $S_{max}$ is shown in Table XXIV, as a function of the operating pressure and functional diameter.

#### Important Note:

The above data are maximum values and cannot be used at the same time. e.g. the maximum operating speed depends on material type, pressure, temperature and gap value. Temperature range also dependent on medium.

\*) In the case of unpressurized applications in temperatures below 0°C please contact our application engineers for assistance !

## Materials

### Standard Application:

- For hydraulic components in mineral oils containing zinc or medium with good lubricating performance.

Turcon® Seal: Turcon® T46

Energiser: O-Ring NBR 70 Shore A or FKM 70 Shore A depending on the temperature

Set reference: T46 N or T46 V

### Special Application:

- Non-lubricating fluids or pneumatic applications require self-lubricating sealing materials. Therefore we recommend:

Turcon® Seal: Turcon® T29

Energiser: O-Ring NBR 70 Shore A or FKM 70 Shore A depending on the temperature

Set reference: T29 N or T29 V

- Rough mating surface finish and improved leakage control

Zurcon® Seal: Zurcon® Z51

Energiser: O-Ring NBR 70 Shore A

Set reference: Z51 N

## Series

Different cross-section sizes are recommended as a function of the seal diameters. These are the criteria for these recommendations.

Table XXIV, shows the relationship between the series number according to the seal diameter range and the different application class sizes. These application classes are:

Standard application: General applications in which no exceptional operating conditions exist.

Light application: Applications with demands for reduced friction or for smaller grooves.

Heavy-duty application: For exceptional operating loads such as high pressures, pressure peaks, etc.

**Table XXII Available range**

Series No.	Bore Diameter D <sub>N</sub> H9
PSK00	6.0 - 140.0
PSK10	10.0 - 140.0
PSK20	18.0 - 320.0
PSK30	40.0 - 400.0
PSK40	50.0 - 700.0
PSK80	133.0 - 999.9
PSK50	250.0 - 999.9
PSK5X	1000.0 - 1200.0
PSK60	750.0 - 999.9
PSK6X	1000.0 - 2700.0

For the recommended range see Table XXIV

## Groove

Stepseal® 2K are also available on request for the groove sizes to ISO 7425/1.

**Table XXIII Turcon® and Zurcon® materials for Stepseal® 2K**

Material, Applications, Properties	Code	O-Ring Material	Code	O-Ring Operating Temp.* °C	Mating Surface Material	MPa max.
<b>Turcon® T46</b> Standard material for hydraulics, high compressive strength, good sliding and wear properties, good extrusion resistance, <b>BAM tested.</b> Bronze filled Colour: Greyish to dark brown	T46	NBR-70 Shore A	N	-30 to +100	Steel tube Steel, hardened Cast iron	70
		NBR-Low temp. 70 Shore A	T	-45 to +80		
		FKM-70 Shore A	V	-10 to +200		
<b>Turcon® T08</b> Very high compressive strength, very good extrusion resistance. High bronze filled Colour: Light to dark brown	T08	NBR-70 Shore A	N	-30 to +100	Steel tube Steel, hardened Cast iron	80
		NBR-Low temp. 70 Shore A	T	-45 to +80		
		FKM-70 Shore A	V	-10 to +200		
<b>Turcon® T40</b> For all lubricating and non-lubricating hydraulic fluids, <b>water hydraulic, soft mating surfaces.</b> Surface texture not suitable for gases. Carbon fibre filled Colour: Grey	T40	NBR-70 Shore A	N	-30 to +100	Steel Cast iron Stainless steel Aluminium Bronze Alloys	30
		NBR-Low temp. 70 Shore A	T	-45 to +80		
		FKM-70 Shore A	V	-10 to +200		
		EPDM-70 Shore A	E**	-45 to +145		
<b>Turcon® T29</b> For all lubricating and non-lubricating hydraulic fluids, hydraulic oils without zinc, <b>soft mating surfaces, good extrusion resistance.</b> Surface texture not suitable for gases. High carbon fibre filled Colour: Grey	T29	NBR-70 Shore A	N	-30 to +100	Steel Cast iron Stainless steel Aluminium Bronze	70
		NBR-Low temp. 70 Shore A	T	-45 to +80		
		FKM-70 Shore A	V	-10 to +200		
		EPDM-70 Shore A	E**	-45 to +145		
<b>Turcon® T05</b> For all lubricating hydraulic fluids, hard mating surfaces, <b>very good slide properties, low friction.</b> Colour: Turquoise	T05	NBR-70 Shore A	N	-30 to +100	Steel tube Steel, hardened	25
		NBR-Low temp. 70 Shore A	T	-45 to +80		
		FKM-70 Shore A	V	-10 to +200		
<b>Turcon® T42</b> For all lubricating and non-lubricating hydraulic fluids, good chemical resistance, <b>good dielectric properties.</b> Glass fibre filled + MoS <sub>2</sub> Colour: Grey to blue	T42	NBR-70 Shore A	N	-30 to +100	Steel tube Steel, hardened Cast iron	40
		NBR-Low temp. 70 Shore A	T	-45 to +80		
		FKM-70 Shore A	V	-10 to +200		
<b>Turcon® T10</b> For oil hydraulic and pneumatic, for all lubricating and non-lubricating fluids, high extrusion resistance, good chemical resistance, BAM tested. Carbon, graphite filled Colour: Black	T10	NBR-70 Shore A	N	-30 to +100	Steel Stainless steel	70
		NBR-Low temp. 70 Shore A	T	-45 to +80		
		FKM-70 Shore A	V	-10 to +200		
		EPDM-70 Shore A	E**	-45 to +145		
<b>Zurcon® Z51***</b> For lubricating hydraulic fluids, <b>high abrasion resistance, high extrusion resistance,</b> limited chemical resistance. Cast polyurethane Colour: Yellow to light-brown	Z51	NBR-70 Shore A	N	-30 to +100	Steel Steel, hardened Cast iron Ceramic coating Stainless steel	80
		NBR-Low temp. 70 Shore A	T	-45 to +80		
<b>Zurcon® Z80</b> For lubricating and non-lubricating hydraulic fluids, high abrasion resistance, very good chemical resistance, limited temp. resistance. Ultra high molecular weight polyethylen Colour: White to off-white	Z80	NBR-70 Shore A	N	-30 to +80	Steel Stainless steel Aluminium Bronze Ceramic coating	45
		NBR-Low temp. 70 Shore A	T	-45 to +80		

\* The O-Ring Operation Temperature is only valid in mineral hydraulic oil. BAM: Tested by "Bundes-anstalt Materialprüfung, Germany".  
 Highlighted materials are standard. \*\* Material not suitable for mineral oils. \*\*\* max. Ø 2300 mm

Installation Recommendation

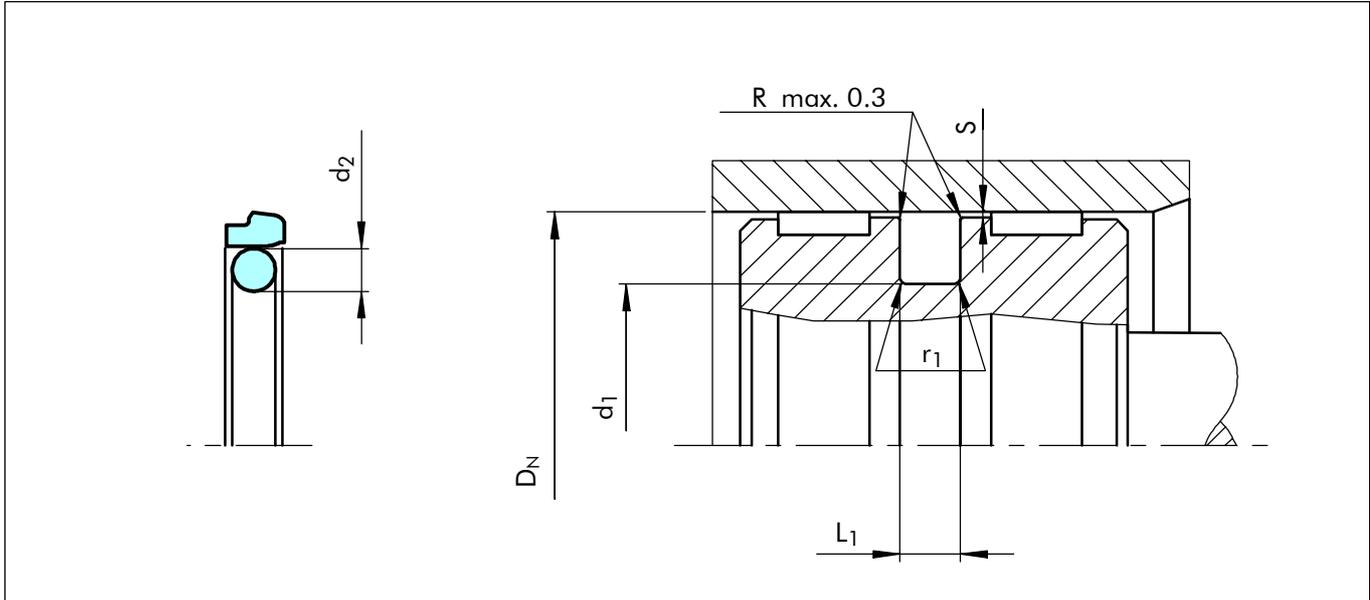

Figure 24 Installation drawing

Table XXIV Installation dimensions - Standard recommendations

Series No.	Bore Diameter			Groove Diameter	Groove Width	Radius	Radial Clearance			O-Ring Cross-Section
	D <sub>N</sub> H9						S max*	d <sub>2</sub>		
	Standard Application	Light Application	Heavy-Duty Application	d <sub>1</sub> h9	L <sub>1</sub> +0,2	r <sub>1</sub>			10 MPa	20 MPa
PSK0	8 - 16.9	17 - 26.9	--	D <sub>N</sub> -4.9	2.2	0.4	0.30	0.20	0.15	1.78
PSK1	17 - 26.9	27 - 59.9	--	D <sub>N</sub> -7.3	3.2	0.6	0.40	0.25	0.15	2.62

PSK5	670 - 999.9	≥ 1000	256 - 669.9	D <sub>N</sub> -27.3	9.5	2.5	1.00	0.80	0.50	8.40
PSK6	≥ 1000**	--	670 - 999.9	D <sub>N</sub> -38.0	13.8	3.0	1.20	0.90	0.60	12.00

\* At pressures > 40 MPa use diameter tolerance H8/f8 (bore/piston) in area of seal

\*\* Energiser has a special shape.

Ordering example

Turcon® Stepseal® 2K, complete with O-Ring, standard application, Series PSK3 (from Table XXIV).

Bore diameter: D<sub>N</sub> = 80.0 mm

Part No. PSK300800 (from Table XXV)

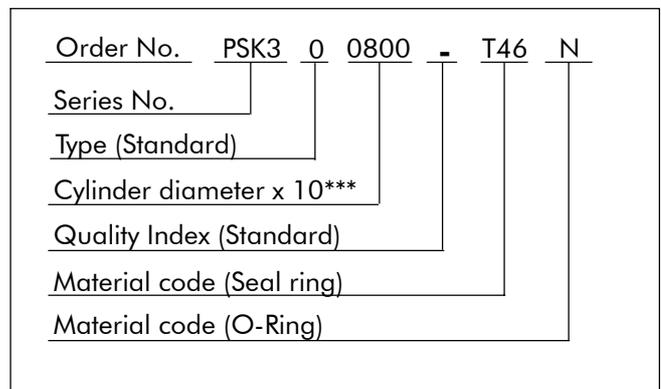

Select the material from Table XXIII. The corresponding code numbers are appended to the Part No. (from Table XXV). Together they form the Order No.

For all intermediate sizes not shown in Table XXV, the Order No. can be determined from the example opposite.

\*\*\* For diameters ≥ 1000.0 mm multiply only by factor 1.

Example: PSK6 for diameter 1200.0 mm.

Order no.: PSK6X1200 - T46N.

The bore diameters in **bold** type comply with the recommendations of ISO 3320.

Other dimensions and all intermediate sizes up to 2700 mm diameter including imperial (inch) sizes can be supplied.

All O-Rings with 12 mm cross section are delivered as special Profiling.

**- Turcon<sup>®</sup>, Zurcon<sup>®</sup> and Elastomer -**

## ■ Turcon® Stepseal® K

### Description

The Stepseal® K is a single-acting seal element consisting of a seal ring of high-grade Turcon® or Zurcon® materials and an O-Ring as energizing element.

The Stepseal® K was originally developed and patented (Patent No. P3225906) by Busak+Shamban as a rod seal. Due to its outstanding properties, however, it is equally well suited as a single-acting piston seal where high demands are made on positional accuracy and free movement.

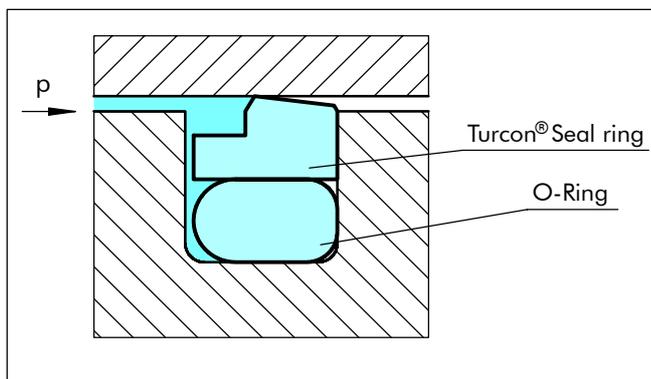

Figure 25 Turcon® Stepseal® K

### Advantages

- High static and dynamic sealing effect
- Stick-slip free operation for precise control
- High abrasion resistance and resistance to extrusion
- Long service life
- Simple groove design, one-piece piston possible
- Wide range of application temperatures and high resistance to chemicals, depending on the choice of O-Ring material
- Simple installation without seal edge deformation due to the K-edge
- Available for all diameters up to 2.700 mm

### Application Examples

The Turcon® Stepseal® K is the recommended sealing element for single acting pistons in hydraulic components for:

- Injection moulding machines
- Machine tools
- Presses

It is particularly recommended in floating piston accumulators as primary seal on the oil side in combination with AQ-Seal® and AQ-Seal® 5.

### Technical Data

Operating conditions	
pressure:	Up to 80 MPa
Speed:	Up to 15 m/s, frequency up to 5 Hz
Temperature:	-45°C to +200°C *)
Media:	Mineral oil-based hydraulic fluids, flame retardant hydraulic fluids, environmentally safe hydraulic fluids (bio-oils), water, air and others, depending on the O-Ring material (see Table XXVI)
Clearance:	The maximum permissible radial clearance $S_{max}$ is shown in Table XXVII, as a function of the operating pressure and functional diameter.

#### Important Note:

The above data are maximum values and cannot be used at the same time. e.g. the maximum operating speed depends on material type, pressure, temperature and gap value. Temperature range also dependent on medium.

\*) In the case of unpressurized applications in temperatures below 0°C please contact our application engineers for assistance !

## Materials

### Standard Application:

- For hydraulic components in mineral oils containing zinc or medium with good lubricating performance.

Turcon<sup>®</sup> Seal: Turcon<sup>®</sup> T46

Energiser: O-Ring NBR 70 Shore A or FKM 70  
Shore A depending on the  
temperature

Set reference: T46 N or T46 V

### Special Application:

- Non-lubricating fluids or pneumatic applications require self-lubricating sealing materials.  
Therefore we recommend:

Turcon<sup>®</sup> Seal: Turcon<sup>®</sup> T29

Energiser: O-Ring NBR 70 Shore A or FKM 70  
Shore A depending on the  
temperature

Set reference: T29 N or T29 V

- Rough mating surface finish and improved leakage control

Zurcon<sup>®</sup> Seal: Zurcon<sup>®</sup> Z51

Energiser: O-Ring NBR 70 Shore A

Set reference: Z51 N

### Groove

Stepseal<sup>®</sup> K are also available on request for the groove sizes to ISO 7425/1.

**Table XXVI Turcon<sup>®</sup> and Zurcon<sup>®</sup> Materials for Stepseal<sup>®</sup> K**

Material, Applications, Properties	Code	O-Ring Material	Code	O-Ring Operating Temp.* °C	Mating Surface Material	MPa max.
<b>Turcon<sup>®</sup> T46</b> Standard material for hydraulics, high compressive strength, good sliding and wear properties, good extrusion resistance, <b>BAM tested.</b> Bronze filled Colour: Greyish to dark brown	T46	NBR - 70 Shore A	N	-30 to +100	Steel tubes Steel, hardened Cast iron	60
		NBR - Low temp. 70 Shore A	T	-45 to +80		
		FKM - 70 Shore A	V	-10 to +200		
<b>Turcon<sup>®</sup> T08</b> Very high compressive strength, very good extrusion resistance. High bronze filled Colour: Light to dark brown	T08	NBR - 70 Shore A	N	-30 to +100	Steel tubes Steel, hardened Cast iron	80
		NBR - Low temp. 70 Shore A	T	-45 to +80		
		FKM - 70 Shore A	V	-10 to +200		
<b>Turcon<sup>®</sup> T40</b> For all lubricating and non-lubricating hydraulic fluids, <b>water hydraulic, soft mating surfaces.</b> Surface texture not suitable for gases. Carbon fibre filled Colour: Grey	T40	NBR - 70 Shore A	N	-30 to +100	Steel Cast iron Stainless steel Aluminium Bronze Alloys	25
		NBR - Low temp. 70 Shore A	T	-45 to +80		
		FKM - 70 Shore A	V	-10 to +200		
		EPDM-70 Shore A	E**	-45 to +145		
<b>Turcon<sup>®</sup> T29</b> For all lubricating and non-lubricating hydraulic fluids, hydraulic oils without zinc, <b>soft mating surfaces, good extrusion resistance.</b> Surface texture not suitable for gases. High carbon fibre filled Colour: Grey	T29	NBR - 70 Shore A	N	-30 to +100	Steel Cast iron Stainless steel Aluminium Bronze	60
		NBR - Low temp. 70 Shore A	T	-45 to +80		
		FKM - 70 Shore A	V	-10 to +200		
		EPDM-70 Shore A	E**	-45 to +145		
<b>Turcon<sup>®</sup> T05</b> For all lubricating hydraulic fluids, hard mating surfaces, <b>very good sliding properties, low friction.</b> Colour: Turquoise	T05	NBR - 70 Shore A	N	-30 to +100	Steel tubes Steel, hardened	20
		NBR - Low temp. 70 Shore A	T	-45 to +80		
		FKM - 70 Shore A	V	-10 to +200		
<b>Turcon<sup>®</sup> T42</b> For all lubricating and non-lubricating hydraulic fluids, good chemical resistance, <b>good dielectric properties.</b> Glass fibre filled + MoS <sub>2</sub> Colour: Grey to blue	T42	NBR - 70 Shore A	N	-30 to +100	Steel tubes Steel, hardened Cast iron	30
		NBR - Low temp. 70 Shore A	T	-45 to +80		
		FKM - 70 Shore A	V	-10 to +200		
<b>Turcon<sup>®</sup> T10</b> For oil hydraulic and pneumatic, for all lubricating and non-lubricating fluids, high extrusion resistance, good chemical resistance, BAM tested. Carbon, graphite filled Colour: Black	T10	NBR - 70 Shore A	N	-30 to +100	Steel Stainless steel	60
		NBR - Low temp. 70 Shore A	T	-45 to +80		
		FKM - 70 Shore A	V	-10 to +200		
		EPDM-70 Shore A	E**	-45 to +145		
<b>Zurcon<sup>®</sup> Z51***</b> For lubricating hydraulic fluids, <b>high abrasion resistance, high extrusion resistance,</b> limited chemical resistance. Cast polyurethane Colour: Yellow to light-brown	Z51	NBR - 70 Shore A	N	-30 to +100	Steel Steel, hardened Cast iron Ceramic coating Stainless steel	80
		NBR - Low temp. 70 Shore A	T	-45 to +80		
<b>Zurcon<sup>®</sup> Z80</b> For lubricating and non-lubricating hydraulic fluids, high abrasion resistance, very good chemical resistance, limited temperature resistance. Ultra high molecular weight polyethylen Colour: White to off-white	Z80	NBR - 70 Shore A	N	-30 to +80	Steel Stainless steel Aluminium Bronze Ceramic coating	40
		NBR - Low temp. 70 Shore A	T	-45 to +80		

\* The O-Ring Operation Temperature is only valid in mineral hydraulic oil. BAM: Tested by "Bundes Anstalt Materialprüfung, Germany".

Highlighted materials are standard. \*\*Material not suitable for mineral oils. \*\*\* max. Ø 2300 mm

■ Installation Recommendation (for new Constructions please apply Turcon® Stepseal® 2K)

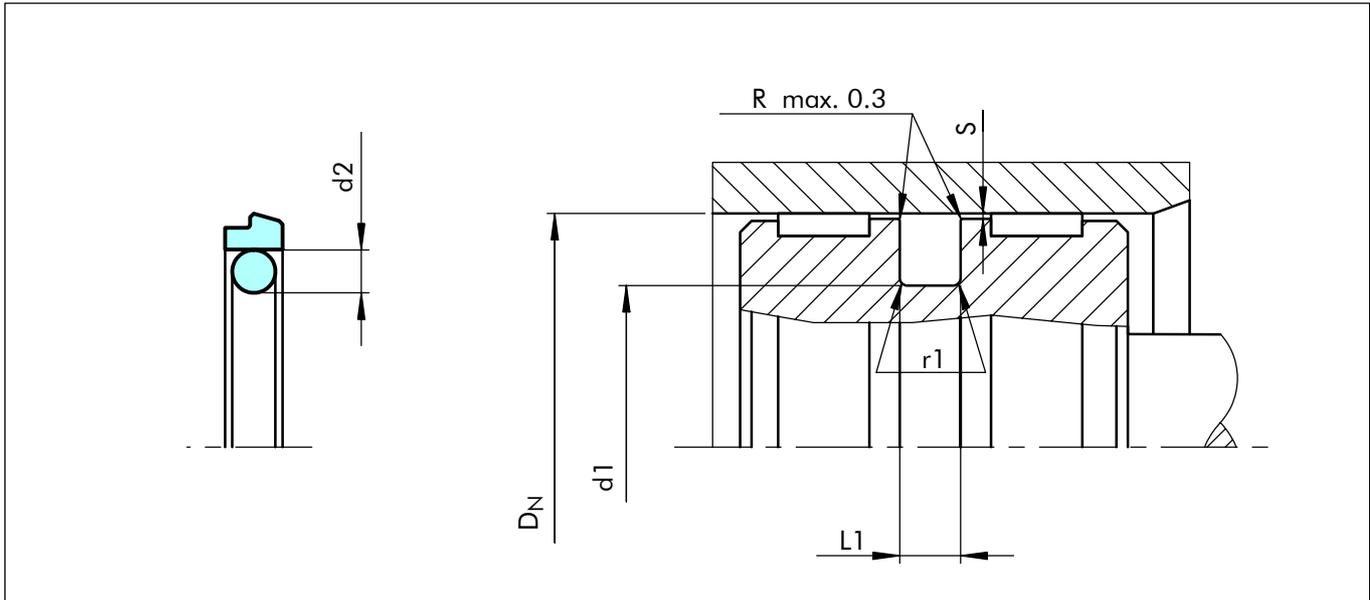

Figure 26 Installation drawing

Table XXVII Installation Dimensions - Standard Recommendations

Bore Diameter D <sub>N</sub> H9			Groove Diameter	Groove Width	Radius	Radial Clearance S max*			O-Ring Cross Sec.

≥ 1000**			D <sub>N</sub> -38.0	13.8	3.0	1.00	0.70	0.60	12.00

\* At pressures > 40 MPa use diameter tolerance H8/f8 (bore/piston) in area of the seal.

\*\* Energiser has a special shape.

Ordering Example

Turcon® Stepseal® K, complete with O-Ring, standard application, Series PS14 (from Table XXVII).

Bore diameter: D<sub>N</sub> = 80.0 mm

Part No. PS1400800 (from Table XXVIII)

Select the material from Table XXVI. The corresponding code numbers are appended to the Part No. (from Table XXVIII). Together they form the Order No.

For all intermediate sizes not shown in Table XXVIII, the Order No. can be determined from the example opposite.

\*\*\* For diameters ≥ 1000.0 mm multiply only by factor 1.

Example: PS14 for diameter 1200.0 mm.

Order no.: PS14X1200 - T46N.

The bore diameters in bold type comply with the recommendations of ISO 3320.

Other dimensions and all intermediate sizes up to 2.700 mm diameter including imperial (inch) sizes can be supplied.

All O-Rings with 12 mm cross section are delivered as special profiling.

## Turcon® Double Delta®

### Description

Turcon® Double Delta® is a rubber energised plastic faced seal. The seal is designed to expand and improve the service parameters of O-Rings and is installed in existing O-Ring grooves.

Double Delta® combines the flexibility and response of O-Rings with the wear and friction characteristics of the Turcon® materials in dynamic applications.

The fig. below shows the cross section of the Double Delta®.

The double acting performance of the seal follows from the symmetrical cross section which allow the seal to respond to pressure in both directions.

Initial contact pressure is provided by radial compression of the O-Ring. When the system pressure is increased the O-Ring transforms this into additional contact pressure, the contact pressure of the seal is thereby automatically adjusted so sealing is ensured under all service conditions.

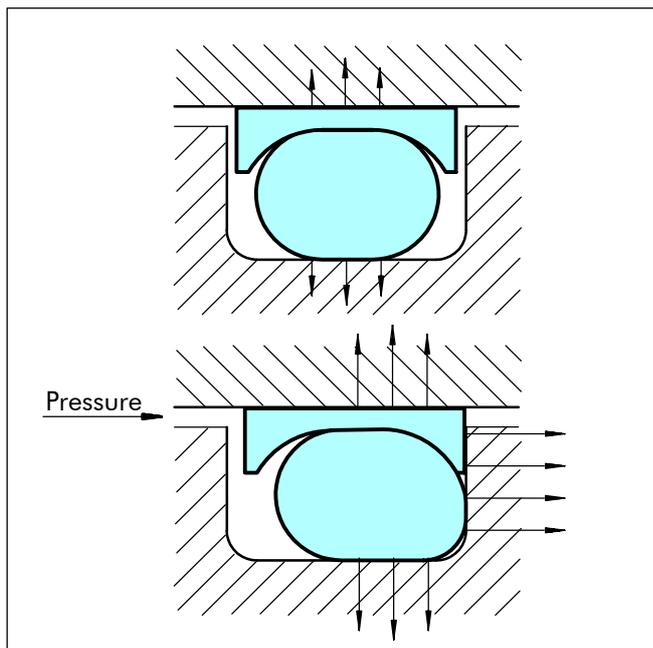

Figure 27 Turcon® Double Delta® without and with pressure

### Notches

Turcon® Double Delta® is as standard supplied without radial notches, as the thin radial section of the seal gives good response to pressure variations.

For diameters from 8 mm notches on both sides are optional. These ensure direct pressurizing of the seal under all operating conditions.

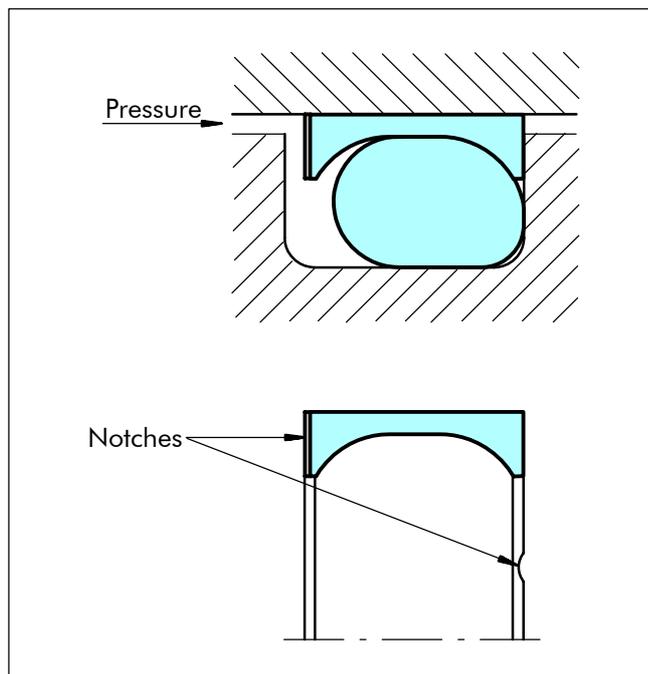

Figure 28 Turcon® Double Delta® with notches

### Advantages

- Compact groove dimensions and simple installation
- Low friction without stick-slip
- Resistance against wear and extrusion
- Piston seals available for all diameters from 5 to 999.9 mm
- Standard cross sections cover AS 568A and important metric O-Rings, other cross sections available on request.
- Fits also groove dimensions per MIL-G-5514F

### Application Examples

The Turcon® Double Delta® is the recommended sealing element for double acting pistons of hydraulic or pneumatic cylinders in sectors such as:

- Machine tools
- Handling devices
- Manipulators
- Valves
- Chemical process equipment

It is particular recommended for light duty and small diameter applications.

## Technical Data

### Operating conditions

Pressure:	Up to 35 MPa
Velocity:	Up to 15 m/s
Temperature:	-45°C to +200°C (according to O-Ring material)
Media:	Mineral oil, Non-flammable fluids, Environmentally safe fluids and others according to O-Ring material.

### Important Note:

The above data are maximum values and cannot be used at the same time. e.g. the maximum operating speed depends on material type, pressure, temperature and gap value. Temperature range also dependent on medium.

## Materials

### Standard Application:

- For hydraulic components with reciprocating movement in mineral oils containing zinc or medium with good lubricating performance and hard mating surface.

Turcon® Seal: Turcon® T46

Energiser: O-Ring NBR 70 Shore A or FKM 70 Shore A depending on the temperature

### Special Application:

- Short stroke movements, poor lubricating fluids and soft mating surfaces.

Turcon® seal: Turcon® T24

Energiser: O-Ring NBR 70 shore A or FKM 70 shore A (depending on the temp.)

- For low friction requirement in dynamic hydraulic components with good lubricating medium:

Turcon® seal: Turcon® T05

Energiser: O-Ring NBR 70 shore A or FKM 70 shore A (depending on the temp.)

- For specific applications other material combinations as listed may also be used. Please contact your local Busak+Shamban Company.

Material for the seal set:

Example: T05 plus FKM - O-Ring T05V  
T46 plus NBR - O-Ring T46N

## Design Instructions

### Lead-in Chamfers

In order to avoid damage to the seal during installation, lead-in chamfers and rounded edges must be provided on the bore or piston rod (Figure 29).

The minimum length of the lead-in chamfer depends on the profile size of the seal and can be seen from the following tables.

Table XXIX Lead-in Chamfers

Lead-in Chamfer* Diameter increase $\Delta D_N$ min.	O-Ring Cross Section** $d_2$
1.4	1.78 - 2.00
1.8	2.40 - 2.62
2.4	3.00 - 4.00
3.2	5.00 - 5.70
4.0	7.00 - 8.40

\* Though not less than 1.5 % of service diameter (bore/piston diameter).

\*\*The O-Ring cross section  $d_2$  can be found in the appropriate tables "Installation Dimensions", XXXI, XXXIII and XXXIV.

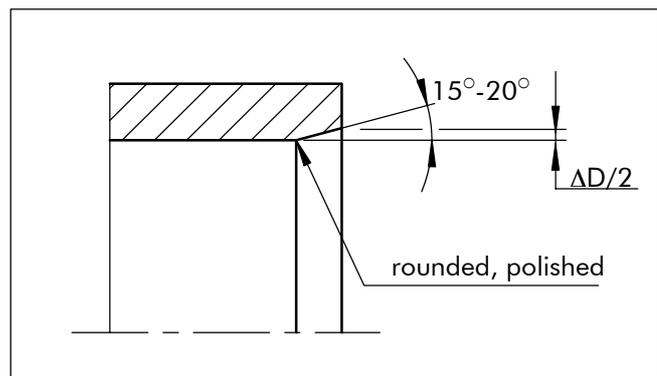

Figure 29 Lead-in chamfers

## Materials

**Table XXX Turcon® Materials for Double Delta®**

Material, Applications, Properties	Code	O-Ring Material	Code	O-Ring Operating Temp.* °C	Mating Surface Material	MPa max.
<b>Turcon® T46</b> Standard material for hydraulics, high compressive strength, good sliding and wear properties, good extrusion resistance, <b>BAM tested.</b> Bronze filled Colour: Greyish to dark brown	T46	NBR - 70 Shore A	N	-30 to +100	Steel tubes Steel, hardened Cast iron	35
		NBR - Low temp. 70 Shore A	T	-45 to +80		
		FKM - 70 Shore A	V	-10 to +200		
<b>Turcon® T24</b> For all lubricating and non-lubricating hydraulic fluids, <b>soft mating surfaces.</b> Carbon filled Colour: Black	T24	NBR - 70 Shore A	N	-30 to +100	Steel Steel, hardened Cast iron Stainless steel Aluminium Bronze	25
		NBR - Low temp. 70 Shore A	T	-45 to +80		
		FMK - 70 Shore A	V	-10 to +200		
		EPDM - 70 Shore A	E**	-45 to +145		
<b>Turcon® T05</b> For all lubricating hydraulic fluids, hard mating surfaces, <b>very good sliding properties, low friction.</b> Colour: Turquoise	T05	NBR - 70 Shore A	N	-30 to +100	Steel tubes Steel, hardened	20
		NBR - Low temp. 70 Shore A	T	-45 to +80		
		FKM - 70 Shore A	V	-10 to +200		

\* The O-Ring Operation Temperature is only valid in mineral hydraulic oil. BAM: Tested by "Bundes Anstalt Materialprüfung, Germany".

Highlighted materials are standard. \*\*Material not suitable for mineral oils.

The bore diameters in bold type comply with the recommendations of ISO 3320.

Part No. for other dimensions and **all** intermediate dimensions up to 999.9 mm diameter including imperial (inch) dimensions can be supplied. Larger dimensions up to 2700 mm available upon request.

## Special Turcon® Double Delta®

### Turcon® Double Delta® for one Back-up Ring grooves

Double Delta® is available for designs where grooves for O-Ring with one Back up Ring are used according to Table XXXIII.

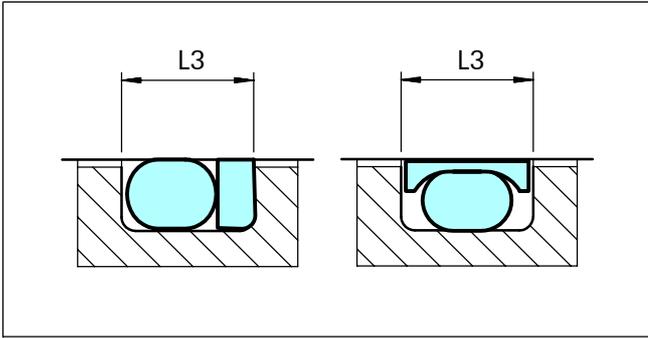

Figure 31 Groove width

**Table XXXIII Seals for one Back-up Ring groove**

## Turcon® Variseal® M2

### Description

The Turcon® Variseal® M2 is a single-acting seal consisting of a U-shaped seal jacket and a V-shaped corrosion resistant spring.

The characteristic of the Variseal® M2 is the newly developed asymmetric seal profile, where the dynamic lip has an optimized short and heavy profile, offering reduced friction and long service life.

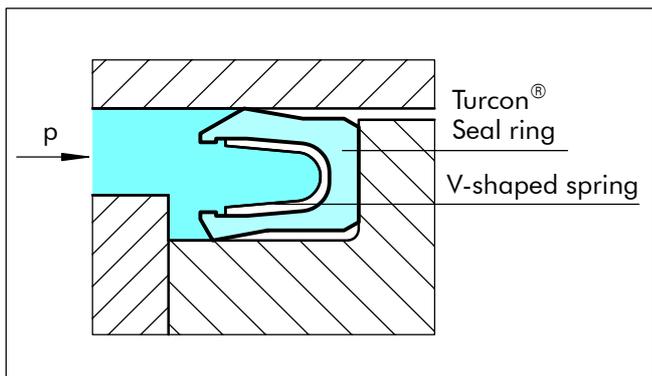

Figure 32 Turcon® Variseal® M2

At low and zero pressure, the metal spring provides the primary sealing force. As the system pressure increases, the main sealing force is achieved by the system pressure and ensures a tight seal from zero to high pressure.

The possibility of matching suitable materials for the seal and the spring allows use in a wide range of applications going beyond the field of hydraulics, e.g. in the chemical, pharmaceutical and foodstuffs industry.

The Variseal® M2 can be sterilized and is available in a special Hi-Clean version where the spring cavity is filled with a Silicone gel preventing contaminants from being entrapped in the seal. This design also works well in applications involving mud, slurries or adhesives to keep grit from packing into the seal cavity and inhibiting the spring action.

For applications with highly viscous media, please contact our Technical department.

Variseal® M2 seals can be installed in grooves to MIL G 5514F and ISO 3771. The seal can only be installed to a limited extent in closed grooves. Installation instructions, see Table VII.

### Advantages

- Resistant to most fluids and chemicals
- Low coefficients of friction
- Stick-slip free operating for precise control
- High abrasion resistance and dimensional stability
- Can handle rapid changes in temperature
- No contamination in contact with foodstuffs, pharmaceutical and medicinal fluids
- Sterilisable
- Unlimited shelf life

### Application Examples

The Turcon® Variseal® M2 is the recommended sealing element for all applications requiring stick-slip free operation as well as chemical resistance against almost all media such as:

- Valves
- Pumps
- Separators
- Actuators
- Dosing devices

It requires a mating surface of high quality to avoid high wear rates.

### Technical Data

Operating conditions	
pressure:	For dynamic loads: 45 MPa
Speed:	Up to 15 m/s
Temperature:	-70° C to +260° C
	For specific applications at lower temperatures, please enquire
Media:	Practically all fluids, chemicals and gases

#### Important Note:

The above data are maximum values and cannot be used at the same time. e.g. the maximum operating speed depends on material type, pressure, temperature and gap value. Temperature range also dependent on medium.

## Materials

All materials used are physiologically safe. They contain no odour or taste-affecting substances.

The following material combination has proved effective for most fluid applications:

Seal ring: Turcon<sup>®</sup> T 40  
Spring: Stainless steel, Material No. AISI 301  
Material code S

For gas applications use:

Seal ring: T05 or Z80

For use in accordance with the demands of the "Food and Drug Administration", suitable materials are available on request.

**Table XXXV Turcon<sup>®</sup> and Zurcon<sup>®</sup> Materials for Variseal<sup>®</sup> M2**

Material, Applications, Properties	Code	Spring Material	Code	Operating Temp.* °C	Mating Surface Material	MPa max.
<b>Turcon<sup>®</sup> T40</b> For all lubricating and non-lubricating hydraulic fluids, hydraulic oils without zinc, <b>water hydraulic, soft mating surfaces.</b> Surface texture not suitable for gases. Carbon fibre filled Colour: Grey	T40	AISI 301	S	-70 to +260	Steel Cast iron Stainless steel Aluminium Bronze Alloys	45
<b>Turcon<sup>®</sup> T05</b> For all lubricating hydraulic fluids, hard mating surfaces, <b>very good sliding properties, low friction.</b> Colour: Turquoise	T05	AISI 301	S	-70 to +260	Steel tubes Steel, hardened	20
<b>Zurcon<sup>®</sup> Z80</b> For lubricating and non-lubricating hydraulic fluids, high abrasion resistance, very good chemical resistance, limited temperature resistance. <b>FDA compliance.</b> Ultra high molecular weight polyethylen Colour: White to off-white	Z80	AISI 301	S	-70 to +80	Steel Stainless steel Aluminium Bronze Ceramic coating	40

\* Depending on media.

Highlighted materials are standard.

## Installation of Spring Energised Seals

See page 13

Installation Recommendation

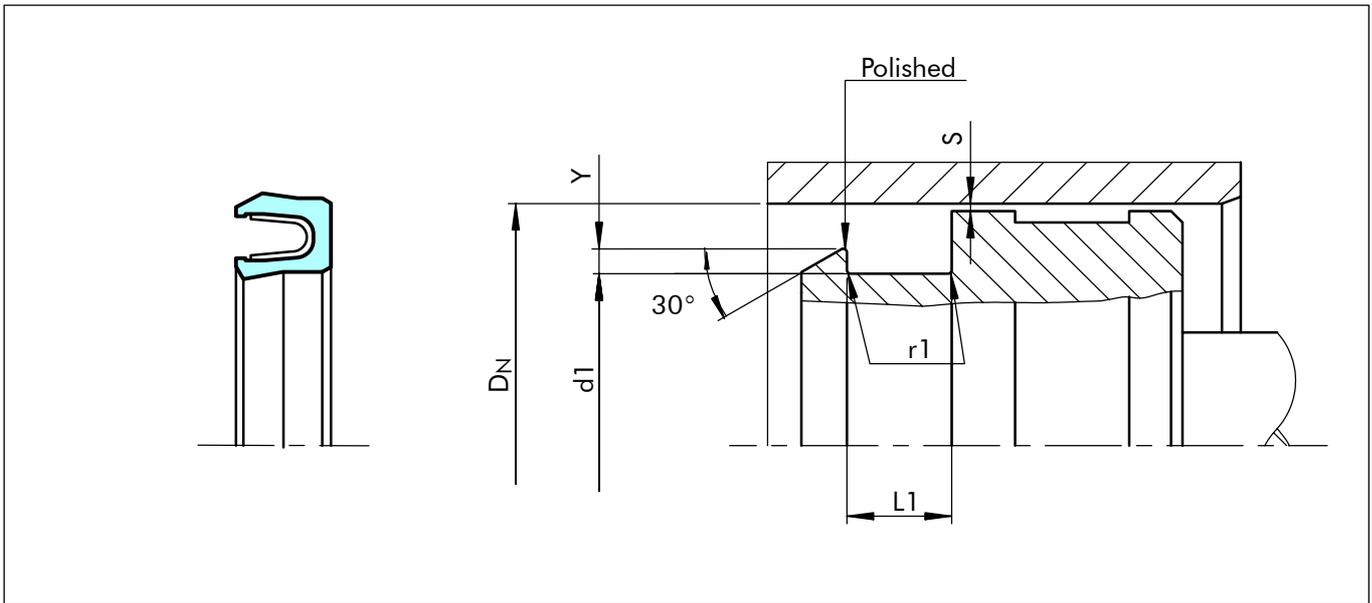

Figure 33 Installation drawing

\*At pressures > 40 MPa use diameter tolerance H8/f8 (bore/piston) in area of the seal.

1) Available on request.

2)  $Y_{max} = 0.035 \times D_N$

Ordering example

Turcon® Variseal® M2, standard range, Series PVA3 (from Table XXXVI).

Bore diameter:  $D_N = 80.0$  mm

Part No.: PVA300800 (from Table XXXVII)

Select the material from Table XXXV. The corresponding code numbers are appended to the Part No. (from Table XXXVII). Together they form the Order No.

For all intermediate sizes not shown in Table XXXVII, the Order No. can be determined from the example opposite.

\*\* For diameters  $\geq 1000.0$  mm multiply only by factor 1.

Example: PVA5 for diameter 1200.0 mm.

Order no.: PVA5X1200 - T40S.

# ZURCON<sup>®</sup> U-CUP PUA

- Single Acting -

- Asymmetric, Single Lip -

- Material -

- Zurcon<sup>®</sup> Polyurethane -

## ■ Piston U-Cup PUA

### Description

The U-Cup is a single acting piston seal out of injection moulded polyurethane. It is provided with a robust dynamic sealing lip and a wide contact area of the static lip, which guaranties an effective positioning in the groove.

The profile is suitable for pressures up to 40 MPa provided that the extrusion gap is adapted to the pressure level.

Thanks to the elasticity of the polyurethane material the U Cup can easily be installed in closed grooves.

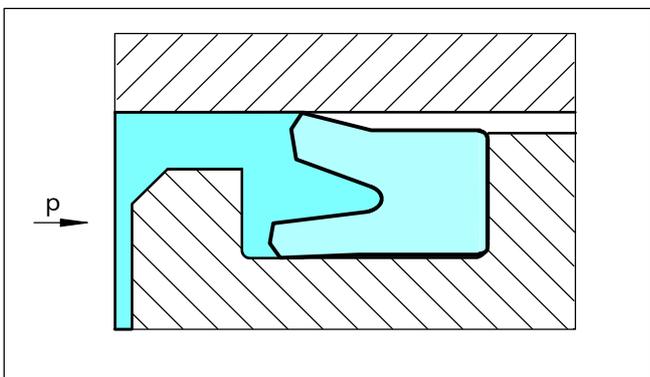

Figure 34 Piston U-Cup Type PUA

### Advantages

- Simple groove design
- High abrasion resistance
- Long service life
- Effective sealing effect even with non excellent mating surface finish

### Application Examples

The U-Cup is the recommended sealing element for single acting pistons of hydraulic components such as:

- Presses
- Lift platforms
- Aftermarket

### Technical Data

Operating conditions

Pressure: Up to 40 MPa

Speed: Up to 0.5 m/s

Temperature: from -35°C to + 110°C

Media: Mineral oil based hydraulic fluids

Clearance: From table XXXVIII the maximum of the radial clearance  $S_{max}$  can be selected for dimensioning the piston. The values indicated in this table must be reduced by 30% when temperature exceeds 80°C.

Table XXXVIII Clearance

Operating Pressure MPa	Radial Clearance S max.	
	$d_N < 60$ mm	$d_N > 60$ mm
5	0.40	0.50
10	0.30	0.40
20	0.20	0.30
30	0.15	0.20
40	0.10	0.15

#### Important Note:

The above data are maximum values and cannot be used at the same time. e.g. the maximum operating speed depends on material type, pressure, temperature and gap value. Temperature range also dependent on medium.

### Materials

#### Standard Material:

- For hydraulic components in mineral oils or medium with good lubricating performance, polyurethane 93 Shore A

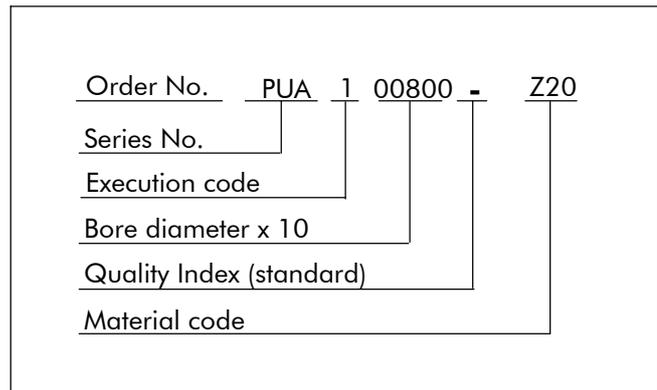

Zurcon® Z20

Colour: turquoise

## Ordering Example

Bore diameter:  $D_N = 80$  mm  
Groove diameter:  $d1 = 65$  mm  
Groove width:  $L1 = 13$  mm  
Part number: PUA100800 (Table XXXIX)  
Material code: Z20

- Double Acting -
- Rubber Energised Plastic Face Seal -
- High Static and Dynamic Sealing Effect -

- Material -
- Zurcon<sup>®</sup> Polyurethane + NBR -

## ■ Zurcon® Wynseal

### Description

The Zurcon® Wynseal is a double-acting seal consisting of a special polyurethane seal ring and an O-Ring as energizing element (Figure 36).

The particular characteristic of the seal is the special design of the seal edge profile. Two external seal edges act as primary seal for pressures from both sides and prevent any build-up of hydrodynamic pressure over the seal profile and the risk of the blow-by effect. The central back-up and sealing bulge increases the sealing effect\*. Grooves are provided on both sides on the plane surfaces to provide activation of the energizing O-Ring. These ensure direct pressure loading of the seal under all operating conditions.

Since the installation groove is identical to that for the Turcon® Glyd Ring®, the seal is ideal for the standardisation of cylinder construction if, efficient and low cost seal elements are demanded in large quantities and, the cylinder can be adapted to meet different operating conditions. It has to be taken into consideration that in this case the gap dimension has to be checked !

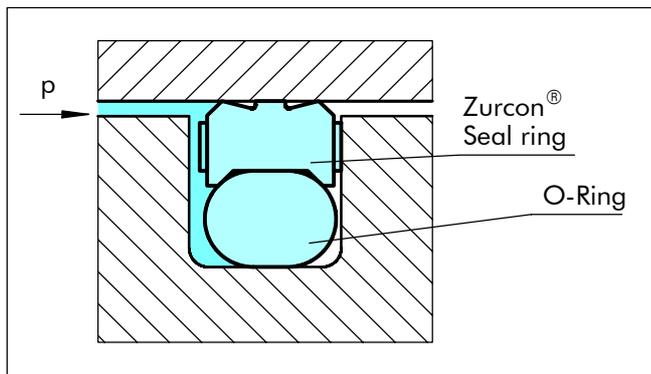

Figure 36 Zurcon® Wynseal

### Advantages

- High static and dynamic sealing effect
- High abrasion resistance
- Simple groove design, one-piece piston possible
- Suitable for grooves to ISO 7425, Part 1.

\*Only from PW42 and the following Series No.; PW40 and PW41 without sealing and supporting bulge.

### Application Examples

The Zurcon® Wynseal is the recommended sealing element for double acting pistons of hydraulic components in various sectors such as:

- Machine tools
- Forklifts & handling machinery
- Agriculture
- Industrial hydraulic light to medium duty

### Technical Data

pressure:	Up to 25 MPa	(Z20N)
	Up to 40 MPa	(Z05N/WUAGN)
Speed:	Up to 0.5 m/s	
Temperature:	-35°C to +110°C	
Media:	Mineral oil-based hydraulic fluids	

#### Important Note:

The above data are maximum values and cannot be used at the same time. e.g. the maximum operating speed depends on material type, pressure, temperature and gap value. Temperature range also dependent on medium.

### Materials

#### Standard Materials:

##### ■ B+S references:

Wynseal:	Zurcon® Z20, 93 Shore A (on request 96 Shore A: reference Z05)
O-Ring:	NBR 70 Shore A
Set reference:	Z20N/Z05N

##### ■ Sealing Parts references:

Sealing ring:	Polyurethane 96 Shore A
O-Ring:	NBR 70 Shore A
Set reference:	WUAGN

**- Material -**

**- Zurcon<sup>®</sup> Polyurethane, NBR Elastomer + POM -**

## ■ PHD/P Seal

### Description

The PHD/P Seal is a high-pressure heavy-duty piston seal with excellent leakage control and superior extrusion and wear resistance

The PHD/P seal is a combination of a Zurcon® polyurethane slipper seal energised by an elastomer profile ring and completed with two Back-up rings (POM). It is manufactured with a predefined interference fit, which together with the squeeze of the elastomer part ensures a good sealing effect even at low system pressure. At higher pressures the elastomer part is energised by the system pressure and consequently activates the slipper seal in the radial direction.

The Back-up rings prevent the slipper seal from extrusion and ensure a long service life even under harsh conditions.

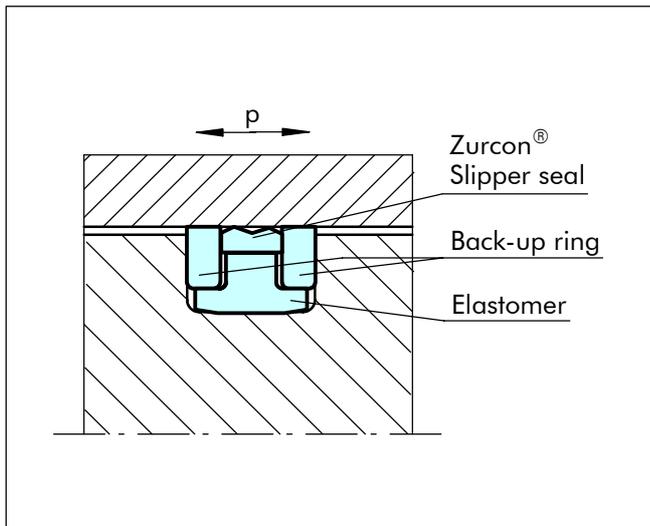

Figure 38 PHD/P Seal

### Advantages

- Simple groove design
- Excellent sealing effect
- Excellent wear resistance
- Increased clearance possible
- Long service life

### Application Examples

The PHD/P Seal is the recommended sealing element for double acting pistons of hydraulic cylinders working in very harsh conditions such as:

- Excavators
- Heavy duty cylinders

### Technical Data

Operating conditions

pressure: Up to 40 MPa  
Peak pressure up to 60 MPa

Speed: Up to 0.5 m/s

Temperature: -35°C to +110°C

Media: Mineral oil based hydraulic fluids

Clearance: The maximum permissible radial clearance  $S_{max}$  is shown in Table XLII, as a function of the operating pressure and functional diameter.

#### Important Note:

The above data are maximum values and cannot be used at the same time. e.g. the maximum operating speed depends on material type, pressure, temperature and gap value. Temperature range also dependent on medium.

### Materials

#### Standard Application:

For hydraulic components in mineral oils or medium with good lubricating performance.

Slipper Seal: Zurcon® Z20 93 Shore A

Energiser: NBR 80 Shore A

Back-up rings: POM

Material code for the set: Z2053

**COMPACT SEAL  
D A S TYPE A/B  
POLYPAC<sup>®</sup> DBM**

- Double Acting -
- Combined Seal and Guide Element -
- Material -
- NBR, Polyester Elastomer + POM -

## Compact Piston Seals

### Description

The Compact Seal is a double-acting seal and guide element comprising an elastomeric profile seal ring, two back-up rings and two guide rings. The profile seal ring seals in both the static and dynamic range whilst the back-up rings prevent extrusion into the sealing gap. The function of the guide rings is to guide the piston in the cylinder tube and to absorb transverse forces. The design provides a compact seal and guide combination for a closed or split installation groove.

### Designs

The Compact Seal is available in various profile geometries which are in practical use. The choice is normally determined by the existing installation grooves.

#### DAS Type A

This type is characterized by the straight, long-sided L-profiles of the guide rings. Compared with Type B, it exhibits a smaller groove depth with the same cylinder diameter.

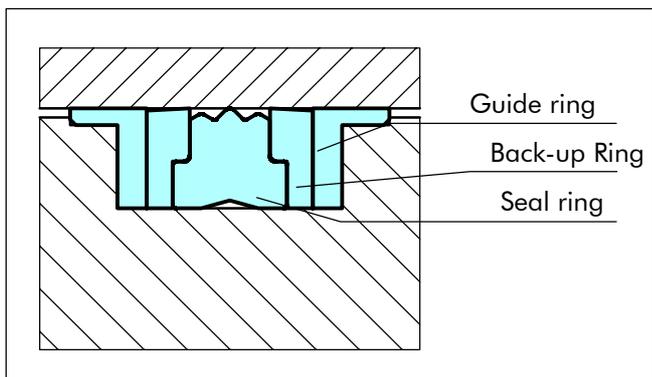

Figure 40 D-A-S Compact Seal, Type A

#### DAS Type B

This type is characterized by a Z-shaped back-up ring which forms a chamber with the elastomer seal ring on the inside and is centered on the outside by the guide ring.

For many piston diameters, the width of the guide ring (dimension L2) can be selected due to sideloads.

Due to the larger groove depth, the profile of the seal ring is more rigid than that of Type A and requires higher installation forces.

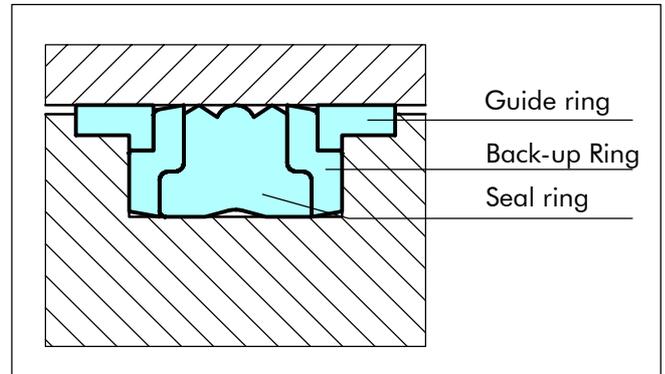

Figure 41 D-A-S Compact Seal, Type B

#### Polypac® DBM

The DBM Compact seal profile is characterized by a concave-shaped Back-up ring that prevents the elastomer profile ring from deformation and/or extrusion. The Back-up ring is centered on the outside by the guide ring.

#### Option

Polypac DBM is an option available without L-shape wear rings, but with Back-up Rings. If DBM/NEO is installed as a piston sealing system, additional Slydring®/wear rings are required.

Polypac type: DBM/NEO  
Consult B+S for available sizes

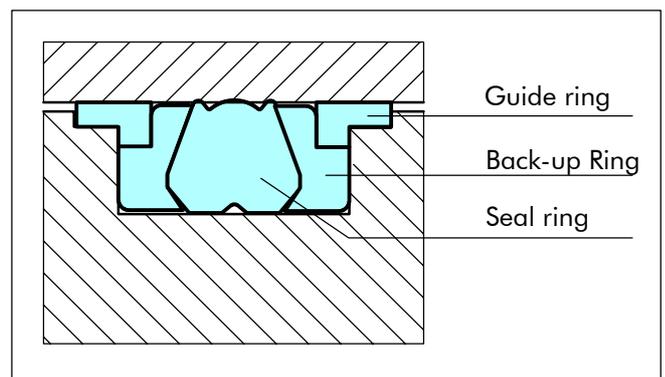

Figure 42 DBM Compact Seal

#### Advantages

- Good sealing effect, also suitable for holding cylinders
- Capable of installation in closed grooves for reduced machining costs
- Economic sealing and guiding solution
- Simple snap installation.

# Compact Seal

## Application Examples

The Compact seals are the recommended sealing element for double acting pistons of hydraulic components such as:

- Machine tools
- Truck cranes
- Forklifts & handling machinery
- Agriculture equipment

## Technical Data

Operating conditions

pressure: Up to 35 MPa peak up to 40 MPa

Speed: Up to 0.5 m/s

Temperature: -30°C to +100°C

Media: Mineral oil-based hydraulic fluids, flame retardant hydraulic fluids, HFA, HFB, HFC (< +40°C)

### Important Note:

The above data are maximum values and cannot be used at the same time. e.g. the maximum operating speed depends on material type, pressure, temperature and gap value. Temperature range also dependent on medium.

## Ordering Example

Bore diameter:  $D_N = 80.0$  mm

Groove diameter:  $d1 = 60.0$  mm

Groove width:  $L1 = 22.4$  mm

# ZURCON<sup>®</sup> COMPACT SEALS

**- Double Acting -**

**- Combined Seal and Guide Element -**

**- Material -**

**- Zurcon<sup>®</sup> Polyurethane, NBR + POM -**

## ■ PU DAS and Polypac® EUD

### Description

The Compact Seals are double-acting piston seals with integrated guide rings. The combination of the elastomer energiser and the polyurethane special shaped sealing element provide excellent sealing effect and service life. The function of the guide rings is to guide the piston in the cylinder tube and to absorb transverse forces.

### Type PU DAS

For the Compact Seal PU DAS is designed without Back-up rings. For easy installation in closed grooves, the combination into one stiff sealing element and one soft energizing element is required. Back-up rings are unnecessary thanks to the high extrusion resistance of the polyurethane material.

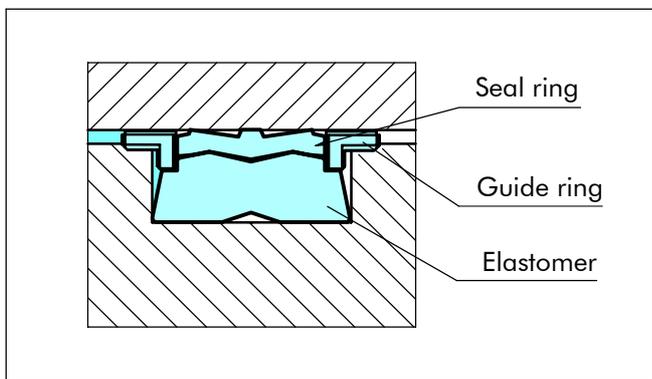

Figure 45 Compact Seal, Type PU DAS

### Type Polypac® EUD

The Compact Seal EUD design includes T-shaped Back-up/guide rings and a combination of seal ring and energiser.

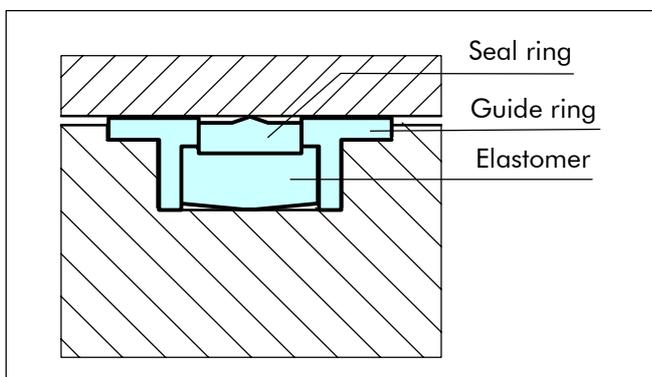

Figure 46 Compact Seal, Type EUD

### Advantages

- High wear resistance
- Low compression set
- Optimal leakage control
- Easy installation into closed grooves
- Excellent service life

### Application Examples

The Zurcon® Compact seals are the recommended sealing element for double acting pistons of hydraulic cylinders for:

- Truck cranes
- Mini excavators
- Heavy duty cylinders

### Technical Data

Operating conditions

Pressure: Up to 40 MPa

Speed: Up to 0.5 m/s

Temperature: -35°C to +110°C

Media: Mineral oil based hydraulic fluids

### Important Note:

The above data are maximum values and cannot be used at the same time. e.g. the maximum operating speed depends on material type, pressure, temperature and gap value. Temperature range also dependent on medium.

### Materials

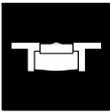

- The Polyurethane Compact seals PU DAS and EUD are available in the following composition:

Sealing ring: Zurcon® Polyurethane 93 Shore A

Energiser: NBR  
70 Shore A Type PU DAS  
78 Shore A Type EUD

Guide rings: POM

Set references: Z2052

# **COMPACT SEAL POLYPAC<sup>®</sup> - DUOPAC DPS/DPC**

- Double Acting -**
- Combined Seal and Guide Element -**
- Material -**
- Rubber Fabric Reinforced NBR and POM -**

## DUOPAC rubber fabric reinforced compact seals Type DPS and DPC

### Description

The compact seals DUOPAC DPS and DPC types are double acting piston seals with integrated guide rings. DUOPAC has been designed to optimize the advantages of the materials selection:

- Fabric reinforcement with high mechanical strength, optimum thermal stability and lubricating properties is incorporated in the sealing element all over the dynamic contact area. For the DUOPAC DPC the reinforcement is extended on both sides to improve the extrusion resistance
- Nitrile based elastomer with optimum elasticity and low compression set provides the initial radial pre-load
- Acetal resin with improved form stability gives the Guide/backup rings high distortion and extrusion resistance

### Type DPS

The DPS profile has been designed for its installation in closed grooves. The radial dimension of the profile has been reduced to the minimum to allow the necessary deformation during installation in closed grooves. Consequently its use must be limited to pressures up to 35 MPa.

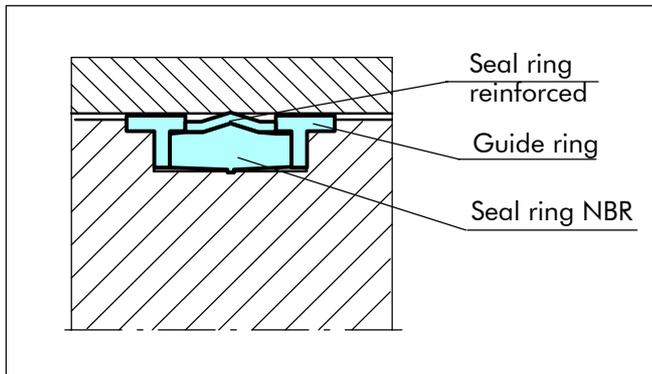

Figure 49 Compact Seal, Type DPS

### Type DPC

The DPC profile is much more robust and can therefore be used for pressure level up to 70 MPa.

An open groove is necessary.

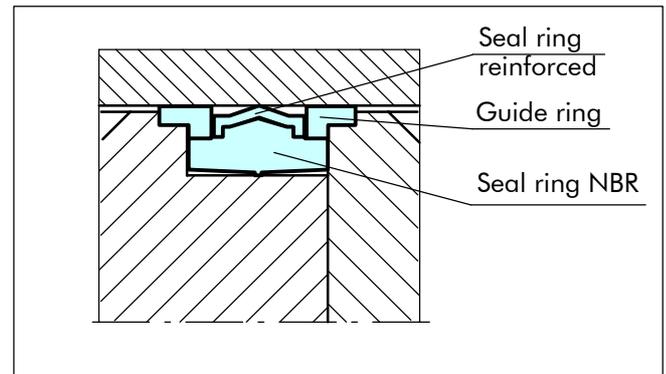

Figure 50 Compact Seal, Type DPC

### Advantages

- DPS can be installed into closed grooves but its use must consequently be limited to medium duty applications
- DPC are usually installed in open grooves in Heavy Duty applications (pressure peak up to 80MPa)
- Improved abrasion resistance
- Excellent sealing effect in combination with good dynamic and static friction behavior

### Application Examples

The Compact seals are the recommended Sealing element for double acting Pistons of hydraulic components in following applications:

- Mining cylinders
- Presses
- Steel mills equipment
- Water hydraulic cylinders

# Compact Seal

## Technical Data

Operating conditions:  
For an optimum performance of the DUOPAC, the recommended tolerances and surface finish must be applied.

- Pressure: Up to 35MPa DPS type  
Up to 70MPa DPC type
- Speed: Up to 0.5 m/s
- Temperature: -30°C to +130°C
- Media: Mineral oil based hydraulic fluids,  
water/oil and water/glycol emulsions.

**Important Note:**  
The above data are maximum values and cannot be used at the same time. e.g. the maximum operating speed depends on material type, pressure, temperature and gap value. Temperature range also dependent on medium.

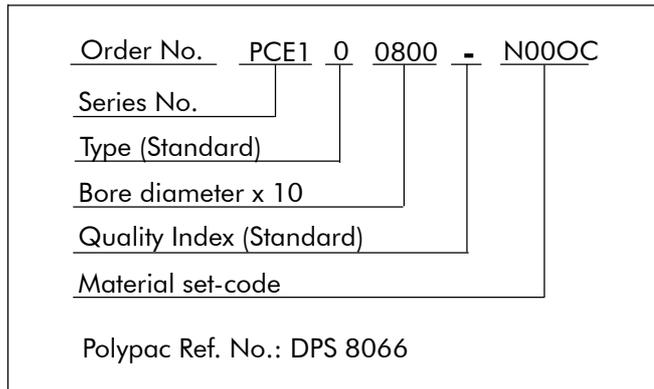

## Materials

- The compact seals DUOPAC are available in the following material composition:
- Sealing element: Rubber fabric reinforced NBR
- Guide/Back-up Rings: POM
- Material set-code: N00OC

## Ordering Example

Compact Seal Type DPS  
 Bore diameter:  $D_N = 80$  mm  
 Groove diameter:  $d1 = 66$  mm  
 Groove width:  $L1 = 22.5$  mm

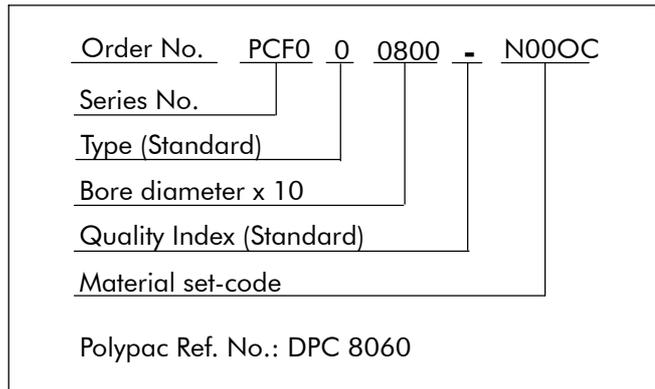

Part No.: PCE100800 (from Table XLVII)  
 Material set-code: N00OC

## Ordering Example

Compact Seal Type DPC  
 Bore diameter:  $D_N = 80$  mm  
 Groove diameter:  $d1 = 60$  mm  
 Groove width:  $L1 = 22.4$  mm

Part No.: PCF000800 (from Table XLVIII)  
 Material set-code: N00OC

# **POLYPAC<sup>®</sup> - VEEPAC CH/G1**

- Single Acting -**
- Chevron Ring -**
- With Support and Pressure Energising Ring -**
  
- Material -**
- POM, PTFE, Fabric Reinforced Rubber -**

## ■ Veepac CH/G1

### Description

Veepac G1 is a set of fabric reinforced rings comprising one support ring, one sealing ring and a pressure energizing ring. It is a single acting piston seal.

The support ring or base ring is manufactured out of nitrile elastomer with high Shore A hardness and reinforced with impregnated cotton fabric layers for an optimal extrusion resistance.

The intermediate ring - the sealing ring - is a fabric reinforced nitrile elastomer with good resilience characteristics enabling the radial deflection under pressure load. Consequently the optimum sealing force is applied to the bore to be sealed.

The energiser or spreader ring is made of POM or PTFE. Its function is to ensure a uniform pre-load of the seal.

In some specific applications the energiser ring is made out of Acetal resin or Phenolic resin. Please contact our local B+S company for further details.

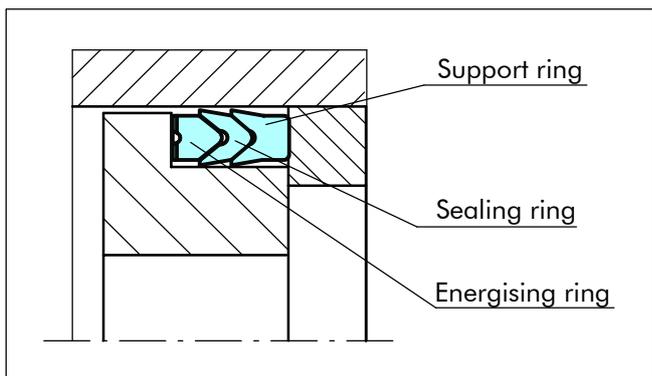

Figure 53 Veepac CH/G1

### Advantages

- Exceptional wear resistance
- Pre-load adjustment capability
- Excellent behavior in harsh conditions

### Application Examples

The Veepac seal is recommended for single acting or double acting (back to back installation) pistons in following applications:

- Mining equipment
- Excavator cylinders
- Steel mill cylinders
- Presses

### Technical Data

Operating conditions:

Pressure: Up to 40 MPa

Velocity: Up to 0.5 m/s

Temperature: -30°C to +200°C, depending on material

Media: Mineral oil, water glycol, water emulsions

#### Important Note:

The above data are maximum values and cannot be used at the same time. e.g. the maximum operating speed depends on material type, pressure, temperature and gap value. Temperature range also dependent on medium.

### Materials

The following material can be delivered:

Material Set Code	Temperature	Sealing Ring Material	Energiser/ Spreader Ring Material
N000C	-30 to +130°C	Cotton reinforced NBR	POM
V0P0C	-20 to +150°C	Cotton reinforced FKM	PTFE
V0P0A	-20 to +200°C	Aramidic fiber reinforced FKM	PTFE

Highlighted material is standard.

### Ordering Example

For sealing element Veepac CH/G1 comprising 1 base ring and 1 Chevron element in cotton fabric reinforced NBR and the Spreader ring in POM.

# **POLYPAC<sup>®</sup> - SELEMASTER DSM**

**- Double Acting -**

**- Compact Piston Seal -**

**- Material -**

**- NBR + Fibre Reinforced NBR + POM -**

## Selemaster DSM

### Description

The piston seal DSM range has been designed to meet the needs of hydraulic equipments operating at high pressures and subjected to severe loading and vibration conditions.

The main sealing element is manufactured in a highly compression set resistant nitrile. The most important quality of this element is the design of the multiple sealing lips for maximum sealing efficiency and end face configuration, which ensures that the selemaster can tolerate vibrations and severe misalignment.

The two support rings are made in cotton fabric reinforced nitrile elastomer; the "U" shape is energised when pressure is applied.

The last elements are the two guide rings manufactured in acetal resin which have also the function of anti-extrusion rings.

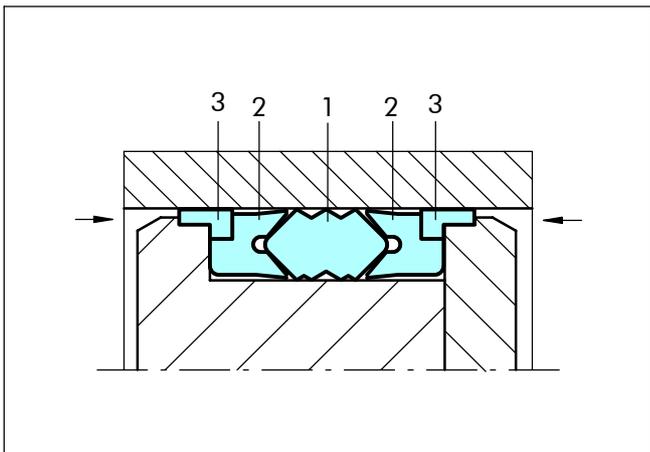

Figure 55 Selemaster design

- 1) Sealing element
- 2) Support ring
- 3) Guide ring

### Advantages

- Effective sealing during vibration and shock loading
- High sealing efficiency
- Extrusion resistance at high pressure

### Application Examples

- Earth-moving machines
- Excavators
- Lift platforms

### Technical Data

Operating conditions

Pressure: Up to 70 MPa

Velocity: Up to 0.5 m/s

Temperature: -40°C to +130°C

Media: Hydraulic fluids  
Mineral oil-based hydraulic fluids, water and water/ glycol emulsions

Groove type: Open

#### Important Note:

The above data are maximum values and cannot be used at the same time. e.g. the maximum operating speed depends on material type, pressure, temperature and gap value. Temperature range also dependent on medium.

### Standard Material

- |                    |                       |
|--------------------|-----------------------|
| 1) Sealing element | NBR 80                |
| 2) Support ring    | Cotton reinforced NBR |
| 3) Guide ring      | POM                   |

# NON STANDARD SEALS

- Available upon Request -
- Old Series -
- Special Series -

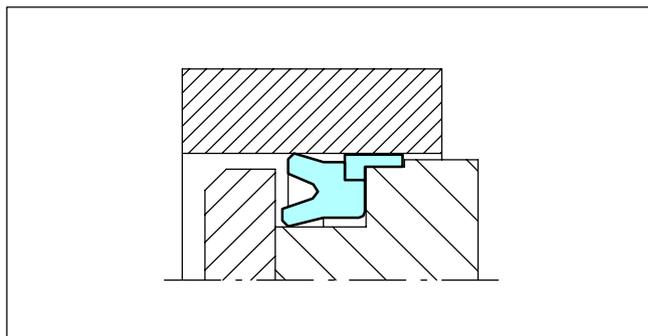

## Sealing Parts RSE/W

Single acting piston seal for dynamic applications. Installed in similar groove as B/NWO. The sealing element consist in a polyurethane U Cup and an L-shaped Back-up/guide ring.

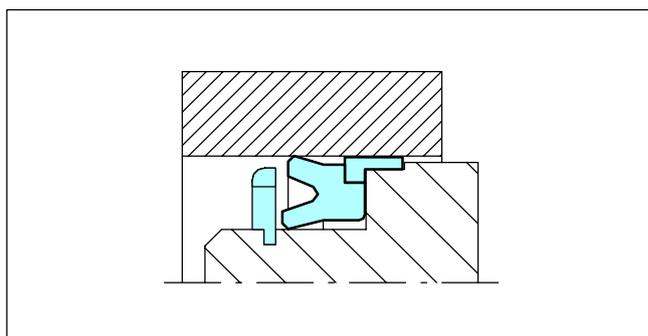

Diameter Range mm	Pressure Range MPa	Temperature Range °C	Velocity m/s
32 - 120	Up to 25	-30 to +80	Up to 0.5

## Sealing Parts RSE/W/AR

Sealing element identical to RSE/W with an additional retaining ring in front to allow easier installation.

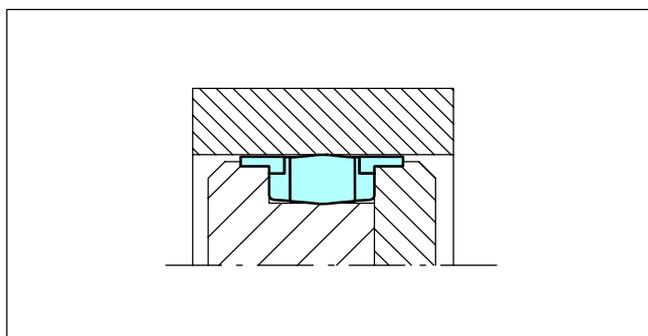

Diameter Range mm	Pressure Range MPa	Temperature Range °C	Velocity m/s
32 - 120	Up to 25	-30 to +80	Up to 0.5

## Polypac® D11W

Double acting piston seal for dynamic applications. Installed in open grooves. The NBR sealing element is supported at both sides by vulcanised cotton fabric reinforced rings with additional guide rings. High sealing efficiency and high wear resistance.

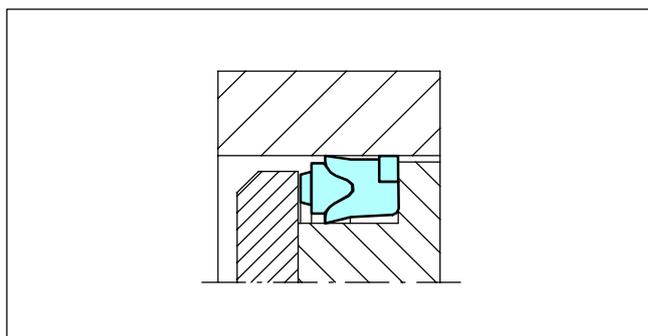

Diameter Range mm	Pressure Range MPa	Temperature Range °C	Velocity m/s
25 - 300	Up to 50	-30 to +200	Up to 0.5

## Polypac® DS - DS/NEO

Single acting piston U Ring for dynamic applications. Installed in open grooves. The U shaped sealing element is made out of cotton fabric reinforced NBR and provide with a NBR energiser ring and an additional POM back up ring can be integrated DS/NEO. High sealing efficiency and high wear resistance.

Diameter Range mm	Pressure Range MPa	Temperature Range °C	Velocity m/s
25 - 300	Up to 70 (DS/NEO)	-30 to +130	Up to 0.5

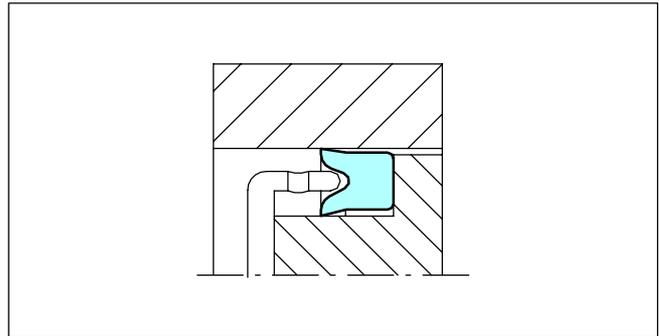

## Non Standard Piston Seals

### Polypac® URS - URFU

Single acting piston U ring. installed in open grooves. The cotton reinforced NBR provides a high degree of stability and long service life.

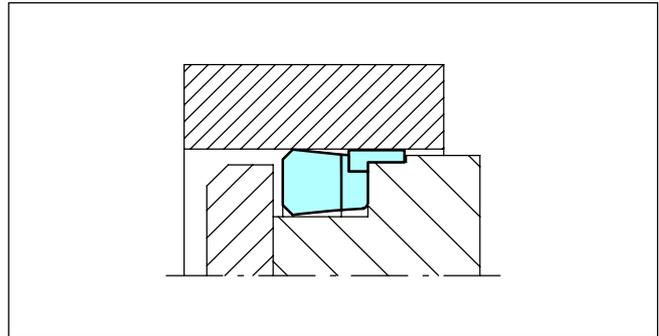

Diameter Range mm	Pressure Range MPa	Temperature Range °C	Velocity m/s
16 - 340	Up to 40	-30 to +130	Up to 0.5

### Polypac® B/NWO

Single acting piston seal for dynamic applications. Installed in open grooves. The nitrile sealing element is supported by a vulcanised cotton fabric reinforced ring with additional guide rings. High sealing efficiency and high wear resistance.

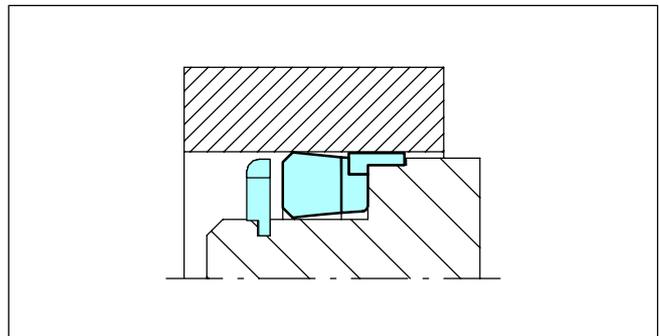

Diameter Range mm	Pressure Range MPa	Temperature Range °C	Velocity m/s
25 - 300	Up to 50	-30 to +200	Up to 0.5

### Polypac® B/NWO - KR

Same sealing element as B/NWO with an additional retaining ring in front to allow easier installation.

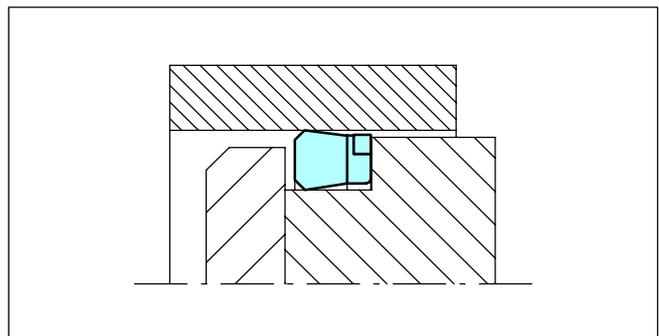

Diameter Range mm	Pressure Range MPa	Temperature Range °C	Velocity m/s
25 - 300	Up to 50	-30 to +200	Up to 0.5

### Polypac® B/NEO

Single acting piston seal for dynamic applications. Installed in open grooves. The nitrile sealing element is supported by a vulcanised cotton fabric reinforced ring with additional anti-extrusion ring. High sealing efficiency and wear resistance.

Diameter Range mm	Pressure Range MPa	Temperature Range °C	Velocity m/s
30 - 65	Up to 40	-30 to +130	Up to 0.5

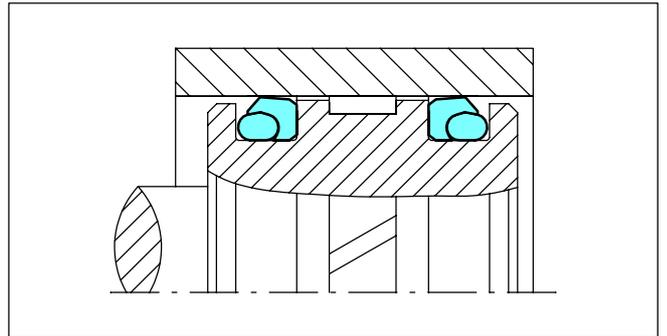

## Turcon® VL Seal™

Single acting O-Ring energised Piston Seal for dynamic applications. Installed in closed grooves. High seal efficiency and high flexibility also under adverse temperature and with radial displacement. Installed in standard O-Ring grooves.

Diameter Range mm	Pressure Range MPa	Temperature Range °C	Velocity m/s
14 - 2700	Up to 60	-45 to +200	Up to 15

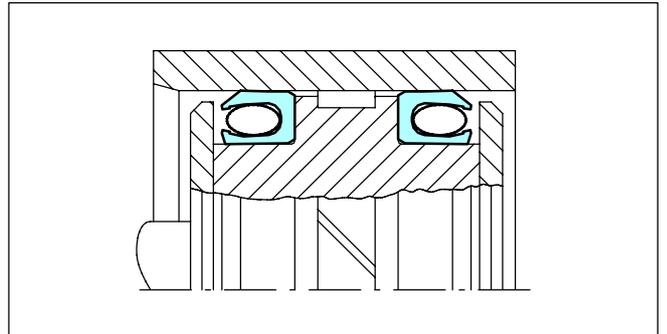

## Turcon® Variseal® W

Single acting piston seal energised by a special helical spring. Its main advantage lies in its low friction and constant preloading force over a relatively large deformation range.

The Turcon® Variseal® W is used wherever friction has to be kept within a narrow tolerance zone.

Diameter Range mm	Pressure Range MPa	Temperature Range °C	Velocity m/s
8 - 2700	Up to 40	-70 to +260	Up to 15

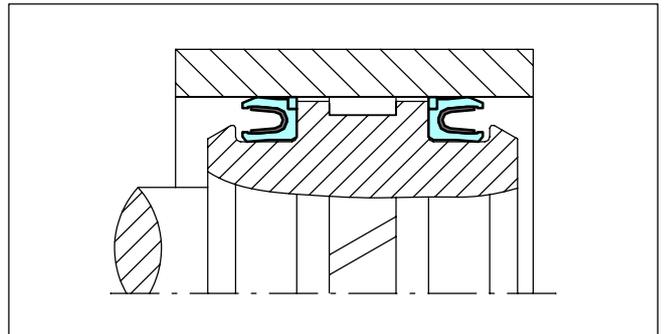

## Turcon® Variseal® M2 CR

Single acting sealing element comprising a U-shaped Turcon® ring and a Stainless Steel energising V spring. Low friction with no Stick-slip, minimal break out force and high wear resistance. Resistant to most liquids and chemicals. Unlimited shelf life.

With integrated back up rings in material Zurcon® Z43 for higher pressures or larger gaps.

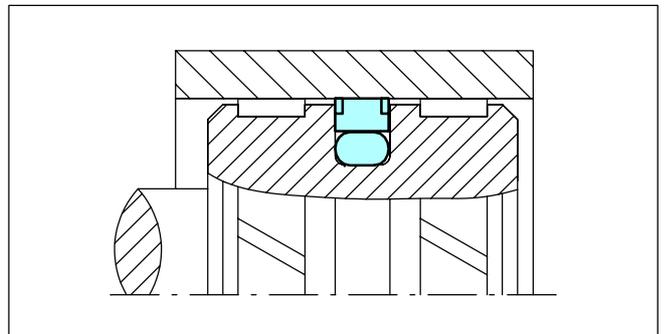

Diameter Range mm	Pressure Range MPa	Temperature Range °C	Velocity m/s
8 - 300	Up to 100	-45 to +260	Up to 5

## Turcon® Glyd Ring® CR

Double acting O Ring energised Piston Seal for dynamic applications. Installed in closed grooves including grooves to ISO 7425 as piston Turcon® Glyd Ring®. Low friction with no Stick-slip, minimal break out force and high wear resistance with integrated back up rings for higher pressures or larger gaps.

Diameter Range mm	Pressure Range MPa	Temperature Range °C	Velocity m/s
8 - 2700	Up to 100	-45 to +200	Up to 5

**Important Note:** In the case of unpressurized applications in temperatures below 0°C please contact our application engineers for assistance !

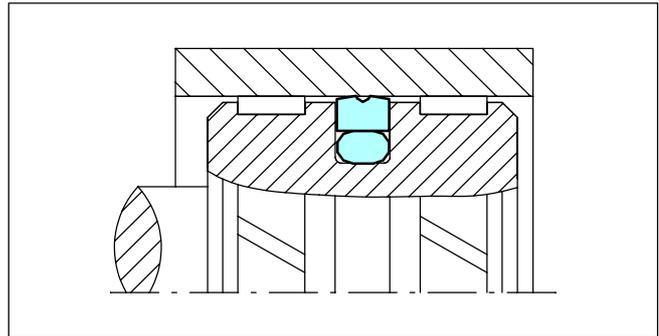

## Non Standard Piston Seals

### Turcon® Glyd Ring® Hz

Double acting O Ring energised Piston Seal for dynamic applications. Special design on the sealing based on two face Stepseal® profiles. The seal width is close to groove width to avoid axial movements.

The Glyd Ring® Hz is particularly dedicated to short strokes and high frequency applications. Installed in grooves according to ISO 7425 as piston Turcon® Glyd Ring®.

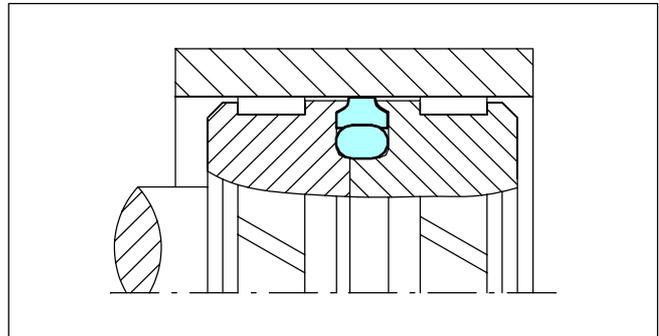

Diameter Range mm	Pressure Range MPa	Temperature Range °C	Velocity m/s
8 - 2700	Up to 40	-45 to +200	Up to 15

### Captive Turcon® Glyd Ring®

For special applications where the Glyd Ring® has to slide across dimensional changes (e.g. go from a small diameter with sealing efficiency over the seal to a larger diameter with no sealing efficiency or vice versa).

In such applications Standard Glyd Ring® would be pressed out of the groove.

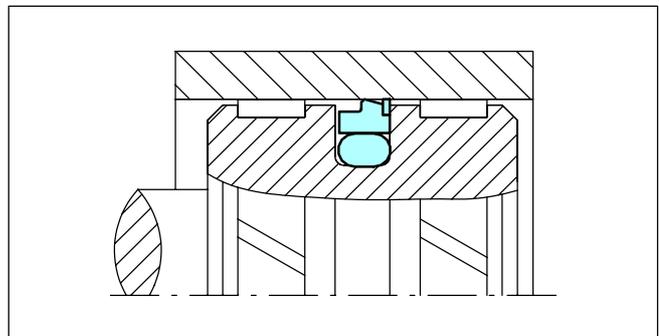

Diameter Range mm	Pressure Range MPa	Temperature Range °C	Velocity m/s
8 - 2700	Up to 60	-45 to +200	Up to 15

### Turcon® Stepseal® CR

Single acting O-Ring energised Piston Seal for dynamic applications. Installed in closed grooves including grooves acc. ISO 7425. High sealing efficiency, low friction with no Stick-slip, minimal break out force and high wear resistance.

With integrated Back-up rings for higher pressures or larger gaps.

Diameter Range mm	Pressure Range MPa	Temperature Range °C	Velocity m/s
8 - 2700	Up to 100	-45 to +200	Up to 5

**Important Note:** In the case of unpressurized applications in temperatures below 0°C please contact our application engineers for assistance !
